R&D M&A INTEGRATION AND DATA MIGRATION SOLUTION
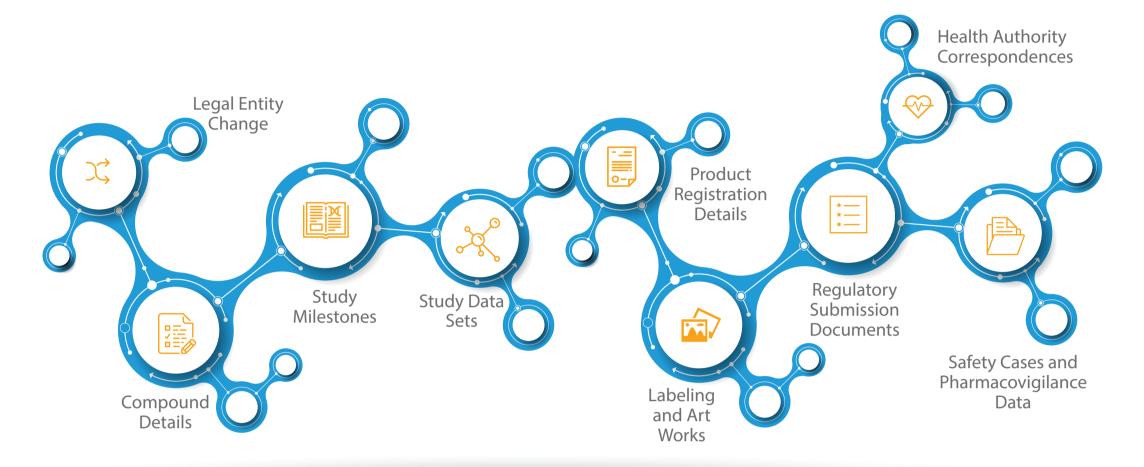

Industry Need

With $300 billion of M&A and divestitures in pharma industry annually, there comes a need to quickly align processes, systems, technologies, capabilities and skills to meet the needs of changing dynamics. Below are some critical data sets, which if done right, would lead to better data governance, and aid quicker ROI post M&A.

- Legal Entity Change
- Compound Details
- Study Milestones
- Study Data Sets
- Product Registration Details
- Labeling and Art Works
- Health Authority Correspondences
- Regulatory Submission Documents
- Safety Cases and Pharmacovigilance Data

Infosys Solution

Infosys M&A Integration and Data Migration Solution cuts across multiple R&D functions including Clinical Trial Solutions, Regulatory Solutions, Safety Solutions, Content Management and Authoring. Key offerings from the solution include:

- Project management, integration, divestiture strategy and budget management
- Documentation of integration process, migration rules and data quality plan
- Application portfolio rationalization
- Data analysis and mapping between source and target systems
- Automation of data mapping template and data ingestion from source systems
- Automation of data entry, quality check and validation

The solution leverages the power of the Infosys AI and automation platform to bring in artificial intelligence, machine learning and extreme automation for R&D M&A Integration and Data Migration.

Outcomes

Key value-adds offered by Infosys R&D M&A Integration and Data Migration Solution are:

- Realization of ROI through seamless combined entities
- Better governance and accountability through managed services model
- Extreme automation to deliver better quality for reduced cost
- Reduced blind spots through COE and best practices
- Cost optimization through resource mobilization across functions
