

Infosys WinRunner to QTP Migrator

With WinRunner nearing the end of its life cycle in 2010, organizations which have invested considerable funds and time in development of automation suites need to port to HP's Quick Test Pro® automation suites immediately, to prevent business disruptions. However for such migrations to be effective,

- The migration has to be automated to ensure the cost of migration does not offset the benefits of automation
- The migration team needs to be skilled in both tools to be able to ensure consistent performance, and,
- The automation framework needs to be retained after the migration process

Infosys' WinRunner to QTP Migrator addresses these needs in an effective and efficient manner. It enables conversion of WinRunner automation suites to QTP automation suites without changes in the automation framework. The combination of a simple GUI with script error checking and detailed log generation capabilities make it a potent tool.

Solution Features

<ul style="list-style-type: none"> • Faster and more cost effective migration • Intelligent mapping of keywords during conversion • User friendly GUI • Retention of source framework • Facility for script ambiguity intervention in UI 	<ul style="list-style-type: none"> • Error free scripts due to error checking function of converted scripts • Batch conversion of scripts within a framework • Easier analysis and validation due to XML reporting function • Scalable target framework
---	---

Solution Benefits

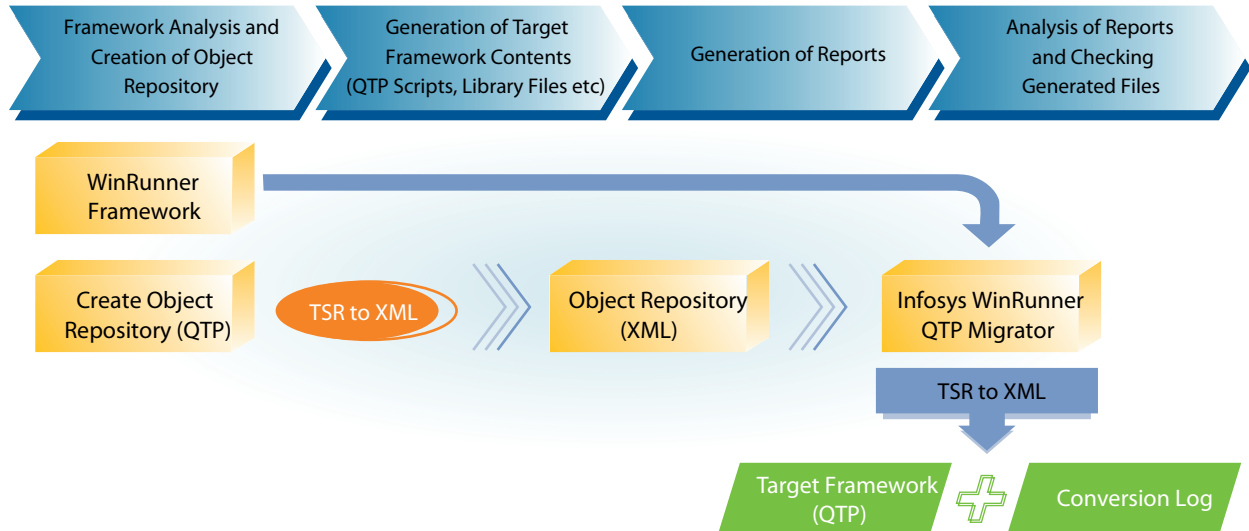

- Reduced cost of migration - 3 times lesser than the manual process
- Faster rate of migration -15 minutes to migrate a script of 800-1000 lines
- Minimal manual intervention and reduced dependence on high cost personnel

- Easy to configure customized migration requirements
- 75 - 85% of the test automation suite is converted automatically
- Supports multiple framework types and constructs
- Successful migration without business disruption

How it Works

Applicability

The WinRunner to QTP Migrator solution can be applied in the following scenarios:

- Automated regression test suites developed for Web Applications using keyword or data-driven frameworks
- End-to-End automated test suites that cover applications in multiple technologies like .NET, Java etc.
- Automated Test Suites for software packages which have a long life span to generate data from production dump or from scratch

Allied Services

Technology Consulting

We work with you to develop implementable architecture solutions that help you leverage technology to enable business strategy. Our solution helps you achieve a balance between IT Effectiveness and business innovation.

Independent Validation

Gives your applications the third degree treatment and tests their robustness and ability to survive your business growth. A “must have” service if you are serious about long term leverage of your application assets.

Process Consulting

Strong quality processes are the key to delivering reliable, usable software within scope and budget commitments. Infosys can help you put in place robust processes to increase productivity, shrink cycle time and enhance customer satisfaction.

Application Development & Maintenance

We help you develop turnkey solutions with a faster time to market and a lower Total Cost of Ownership. Our services range from building a business case to assessing your application portfolio to designing solutions to building and implementing the solutions.
