

Infosys Inventory Visibility and Control Solution

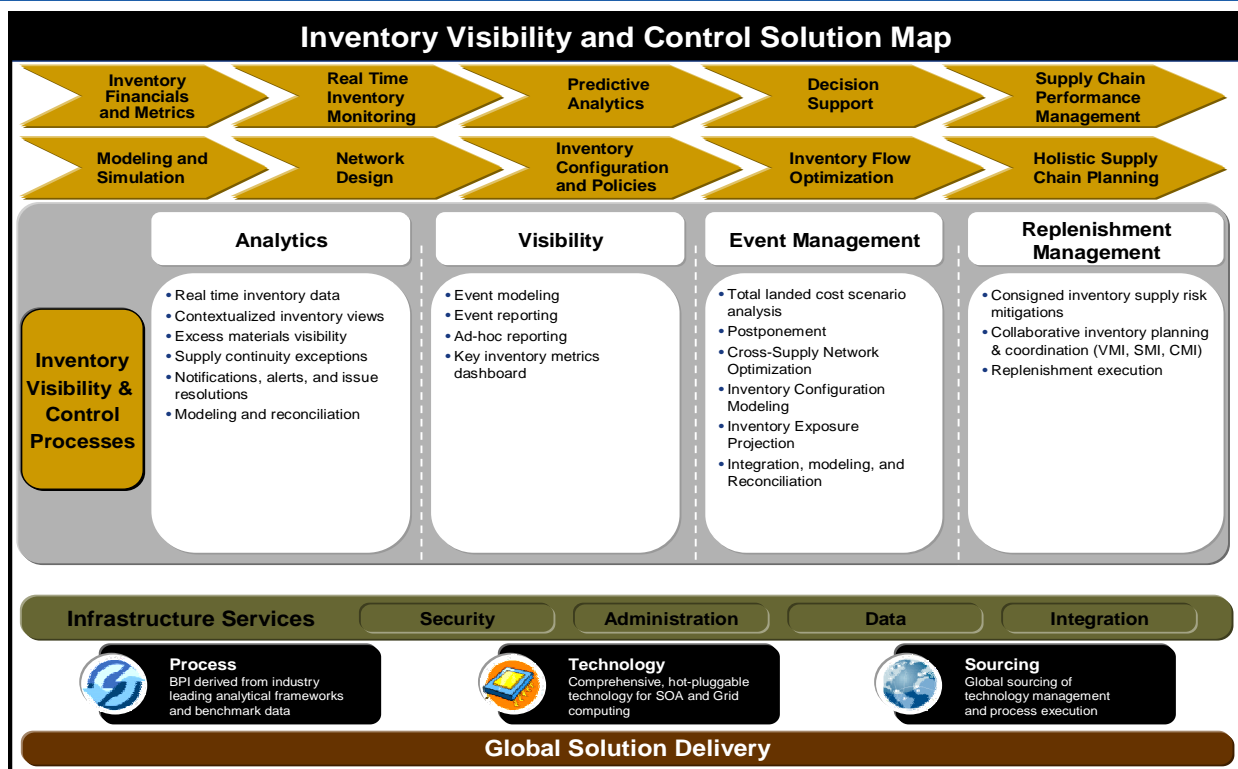

In the [flat world](#), companies are under pressure to manage their supply networks to better serve their customers. Inadequate end-to-end supply chain visibility and siloed operations result in high operating costs and poor service levels.

Infosys Inventory Visibility and Control Solution delivers competitive advantages for extended supply chains by increasing execution responsiveness, cutting inventories, and improving manufacturing execution collaboration. It enhances the ability to view, control, and balance inventory during execution, providing an early warning system for disconnects which tie up inventory, resources, and costs.

The solution monitors inventory positions and liabilities, contract manufacturer & 3PL build and delivery schedules, and replenishment execution to precisely project where unexpected events (supply disconnects, late work order starts, channel inventory issues) may hit supply chains before they occur.

Through integration with Oracle Applications and Fusion Technologies it manages exception conditions with alerts and workflow tuned to the needs of global, fast moving supply chains.

A powerful and flexible supply chain visibility and control solution

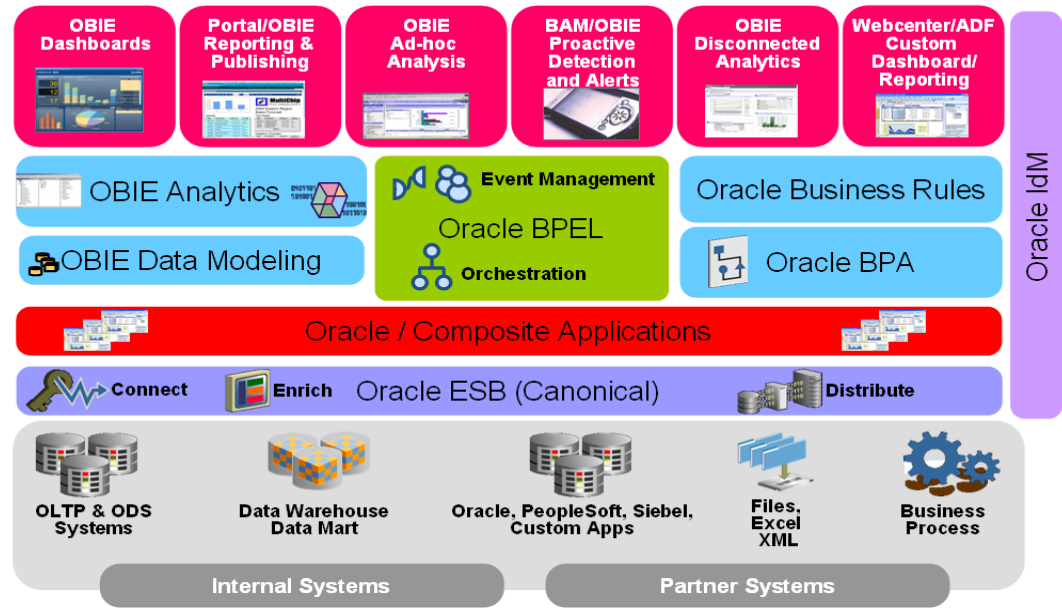

Enhance supply chain effectiveness. Eliminate inefficiencies

The Inventory Visibility and Control Solution is designed around specific client needs and is metrics-driven:

- “Early warning system” highlights potential execution issues before they happen
- Increased visibility and control over inventory investments
- 10-30% reduction in buffer inventories while improving service levels
- 20-40% improvement in inventory turns
- 25-50% reduction in inventory carrying costs and working capital
