

Wireless M2M Solutions for Asset Monitoring & Management

Organizations are increasingly adopting intelligent devices and advanced machine-to-machine (M2M) wireless connectivity to improve their operations. Cellular networks are used in conjunction with emerging technologies like RFID and GPS in a wide range of applications such as automated meter management, container tracking, fleet management, telemedicine, telemetry, real-time asset tracking and security, and equipment monitoring and diagnostics.

Given the criticality of field assets in today's extended enterprise, organizations must monitor, control and manage their distributed assets efficiently. All field data should be gathered and integrated into business processes in real-time to enhance the quality of business decisions.

Infosys' **Wireless Machine-to-Machine (M2M)** offering enables better asset management to make you more competitive. The solution provides access to real-time information, allowing you to:

- Improve customer experience
- Enhance operational efficiencies
- Reduce costs
- Optimize resource utilization

Infosys–Wavecom Partnership: A milestone in M2M

With intelligence and connectivity embedded into devices, there is an increasing need for software and software integration services. The Infosys–Wavecom partnership offers a potent combination of Wavecom's leading wireless technology and Infosys' domain, consulting and systems integration expertise.

Infosys is a Wavecom Certified Competence Center, offering design, development and integration services based on Open AT® — Wavecom's industry standard technology for M2M applications.

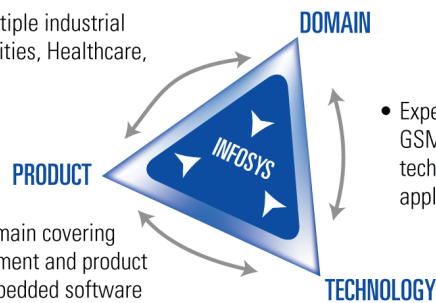

"Defining the relationship between Wavecom and Infosys in a few words, I would say it is about trust, quality, stability and predictability ... We are now in a position where we are asking Infosys to support us in the local market to support our final customers integrating our solutions and thanks to the knowledge of Infosys about the modules ..."

- Luc Degaudenzi, Group VP, Wavecom

The Infosys Edge

Infosys addresses your business problems with solutions that offer cost-competitive designs, rapid time-to-market and industrial reliability. Infosys' solutions are backed by:

- Extensive knowledge and experience in multiple industrial sectors including Automotive, Energy & Utilities, Healthcare, Retail, and Transportation & Logistics

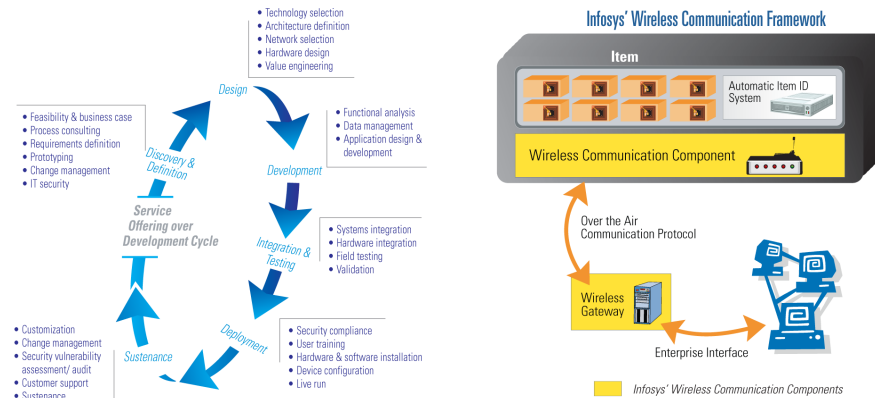

- Expertise in wireless technologies such as GSM/GPRS, UMTS, Wi-Fi and complementary technologies like Bluetooth & RFID, enterprise IT and application integration

- Proven skills in the product engineering domain covering product conceptualization, design, development and product lifecycle management in hardware and embedded software

Service Offerings

Infosys' services span the entire solution lifecycle — from developing a business case, selecting a platform and developing the solution to deployment and sustenance. The solution development process is accelerated by Infosys' platform independent wireless communication framework.

Wireless asset management helps a retail client reduce product expiration

Using a wireless M2M remote asset management solution developed by Infosys, a retail client expects to *reduce product expirations by 50%, slash transaction cost in the Order-through-Shipment cycle by 15% and increase stock availability at point of consumption by 10%.*

Infosys has developed this automatic item tracking solution based on a Wavecom Wireless CPU. Using an intelligent field device attached to a dispenser and by transmitting data over a public GPRS network, the solution provides real-time access to field inventory information to enterprise users.

Allied offerings

Business Consulting

Provides you with strategic differentiation and operational superiority, assessments, proprietary industry analyses & projects structured around beating the competition.

Business Process Outsourcing

We offer business process outsourcing solutions to our global clients by leveraging process, domain and people management expertise. At Infosys, we have built our organization around managing risk for our clients through a scalable, cost-effective and predictable delivery platform.

Enterprise Application Integration

Make the whole of your IT applications much greater than the sum of its parts. Infosys can leverage the Global Delivery Model (GDM) to deliver immediate and dramatic productivity growth like no one else can.

Infrastructure Management Services

Our range of services is geared to keep your operations running smoothly and reduce costs. Services include infrastructure planning, auditing, data center and application management and help-desk services.
