

A portfolio approach to minimize risks and optimize returns

Infosys' Application Portfolio Management (APM) solution assists in better alignment of your enterprise's application inventory with your business goals and priorities, and in monitoring the application portfolio based on customized metrics.

APM is an expedited tool based methodology to identify rationalization opportunities and recommend strategies to optimize the application portfolio. The solution helps analyze and categorize applications in the portfolio based on business value, risks and fit with your organization's preferred direction.

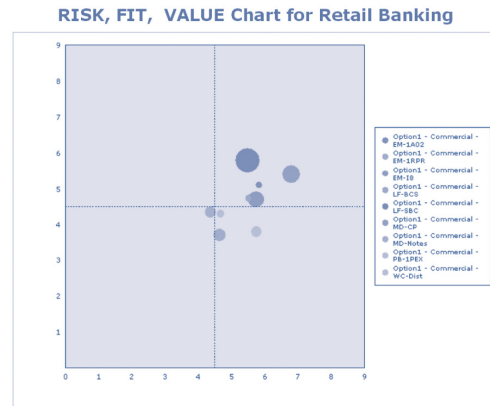

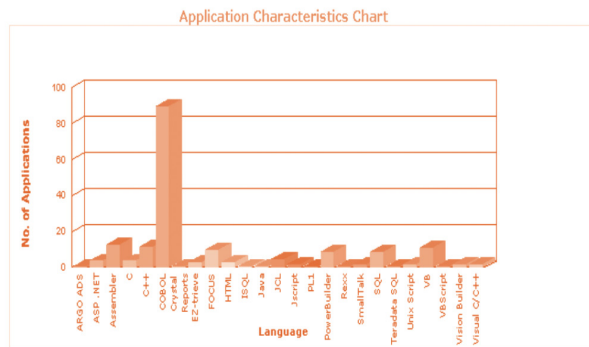

- Customized metrics and optimal sourcing recommendations
- Intelligent tool - Repository of hypotheses, metrics benchmarks (Infosys' learning over the years)
- Designed for rapid deployment and execution
- Multiple reporting formats and parameters
- Management dashboard – monitor key performance indicators (such as cost data & TCO) for each application on an ongoing basis
- Tested and proven, with high levels of customer satisfaction

The brains behind the tool

The APM tool is customizable to individual organizations and features multiple reporting on different parameters. The tool includes an information repository of best practices, benchmarks and data (current & historical). The 1) Roadmap Generator 2) Portfolio Analysis Engine and 3) TCO Engine modules process the data and send it on to the 4) Reporting module, where the user views customized reports. A built-in interface links with various applications for real-time portfolio monitoring and governance.

Reporting and the workbench

The APM tool features rigorous reporting characteristics. The highly customizable workbench captures data about your applications and provides you with the flexibility of “status-checks” of your portfolio under a variety of parameters.

The flexible architecture linking your systems to the tool gives you real time information about your IT portfolio performance, in the parameters you want, radically improving governance and decision making.

Infosys APM expertise in Action

- A financial services conglomerate - Infosys used its APM methodology to analyze application portfolio and helped the client gauge “true” application costs and make decisions in terms of investment, support and decommissioning.
- A leading mortgage bank - Infosys’ APM solution helped review the client’s application cost base and suggested both strategic and tactical areas for reduction in technology costs incurred to support the business.
- Leading Universal Bank - Infosys assisted the bank in designing an application portfolio capable of supporting its acquisition driven growth strategy.
- Leading Credit Card Services provider - Infosys designed a future state IT portfolio aimed at decentralizing IT ownership.

Allied offerings

Business Consulting

Provides you with strategic differentiation and operational superiority, assessments, proprietary industry analyses & projects structured around beating the competition

Data warehousing & Business Intelligence

As business gets more competitive, corporate decision makers need to analyze enterprise data, hidden in multitudes of operational and legacy systems. BI solutions, powered by optimally designed Data Marts or Enterprise Data Warehouses, address this challenge.
