

Infosys iTransform™

The Smoothest Road to HIPAA 5010 Compliance for Payers

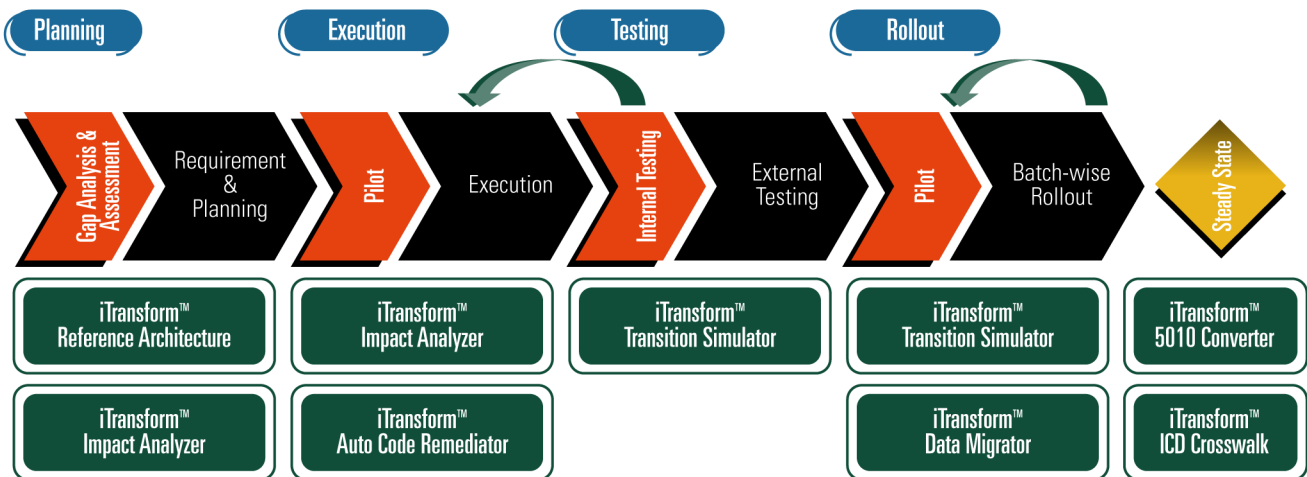

HIPAA 5010 is a pre-requisite for transitioning to ICD-10. HIPAA-covered entities are required to be able to accept and send HIPAA 5010 transaction formats by January 2012. All nine HIPAA transactions are impacted, and HIPAA 5010 has more than 1,000 unique changes as compared to its predecessor's (4010) transaction formats.

The transition entails significant changes to the information systems and processes that support core operations for healthcare organizations. Health plans will need to redesign their systems and processes to handle the new transaction standards. Though disruptive, the transition to HIPAA 5010 opens the door for significant efficiency improvements for health plans. Organizations can use the transition to redesign processes and improve efficiency, giving them a competitive advantage in the coming years.

Infosys' iTransform™ Product Suite offers an end-to-end offering to manage the 5010 transition. The product suite automates a significant amount of the transition exercise, saving time and money. Leveraging detailed reference architecture, automation components, and Infosys' extensive domain knowledge, the product suite can ensure a smooth transition experience and maximize the returns from these transitions.

Infosys' HIPAA 5010 Assessment and Remediation Services

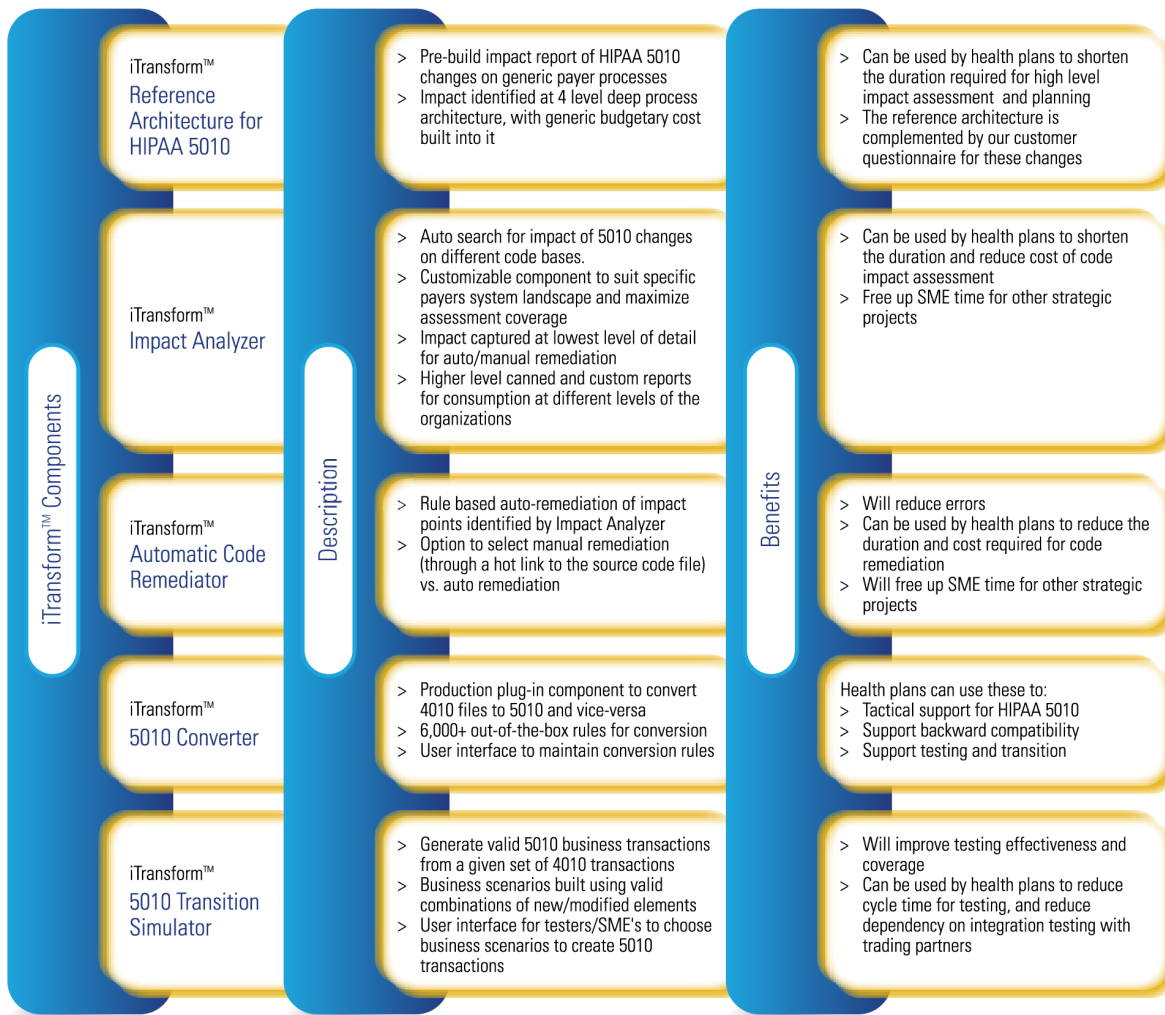

Infosys' iTransform™ Product Suite adopts a comprehensive approach for HIPAA 5010 assessment and remediation and addresses the key concerns of a large scale transition, at different levels.

iTransform™ helps healthcare organizations plan the entire remediation cycle in a way that leads to minimum disruption in day-to-day business activities. The approach begins with gap analysis and comprehensive assessment of the business processes and systems. Inputs from these are used to finalize requirements and detail the project execution plan. The planning phase is followed by process and systems remediation and internal and external testing and rollout, leading to the steady state in the new platform.

iTransform™ Tools and Accelerators

The product suite uses tools and accelerators to speed up every phase of the transition, lower cost and risk and maximize returns. The suite consists of a collection of well-defined components that work in tandem to provide a complete solution from assessment to steady state. Each component can work in isolation and targets the specific needs in a phase, such as code analysis for impact assessment of custom applications and converters for backward compatibility support during steady state. These components, though self-contained and available individually through an à la carte menu, work together towards the overall assessment, remediation and uninterrupted operations under the HIPAA 5010 world. The components are detailed out in the figure.

iTransform™ Benefits

- ▶ Reduce cost and duration of transition by up to 50%
- ▶ Reduce inherent risks with manual analysis and remediation
- ▶ Free up SME time for strategic initiatives
- ▶ Maximize returns from the initiative
