

Application Virtualization Solution (AVS)

Companies are increasingly faced with the challenge of reducing IT infrastructure costs while increasing operational flexibility, improving service levels and achieving customer satisfaction.

Application Virtualization with SoftGrid provides companies with the benefits of a centrally managed, dynamically deployable, streamed on-demand application access from local desktops/terminal server clients without installing the application.

With Application Virtualization it is possible to run applications within a virtual bubble, which will maintain application configuration within itself and decouple the operating system from the application. This reduces the risk of application incompatibility and conflict. Also, since the applications are centrally managed, application licensing and user provisioning is easy to manage. Further, since the applications run within the virtual bubble, regression testing costs, the costs of new deployment, updates and termination are reduced. Even as the application runs within the bubble, it is still possible to access local infrastructure like network devices, local resources and any other interaction between applications. In a nutshell, SoftGrid provides per user, per application instance virtualization - including that of registry and other configuration settings.

Some of the benefits of AVS are reduced TCO, improved user productivity, improved service levels, minimal maintenance and IT support costs, reduced helpdesk calls, easier updates/ terminations, reduced complexity and labor involvement in new application deployment and zero regression testing costs. Impact on indirect IT costs include improved s/w and regulatory policy management, license management and improved customer satisfaction.

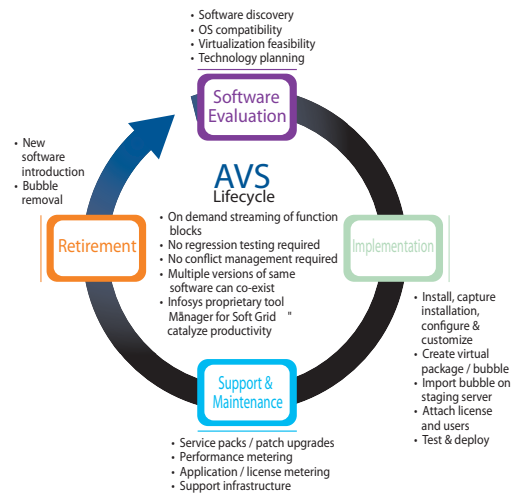

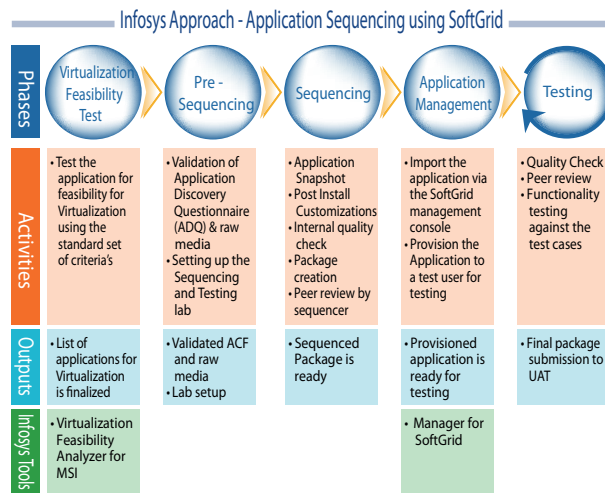

Infosys' Application Virtualization Solution (AVS) on Microsoft a part of Infosys' Catalytic IT solution suite, adopts a comprehensive, cost-effective and accelerated approach to application virtualization and with minimal business disruption. Infosys' AVS services provide end-to-end solutions for your organization's desktop application landscape - from application inventory, rationalization, sequencing, testing, and virtualization and to deployment and support. It also uses proprietary tools, techniques and best practices developed by Infosys' Vista Center of Excellence, which has created award-winning deployment solutions on the Microsoft platform. AVS is a part of our catalytic IT suite of applications, which has been successfully applied to complex deployment programs for about 25 Fortune 500 customers, and over 200,000 desktops world wide.

Solution Benefits

Solution Benefits	Comprehensive Implementation	<ul style="list-style-type: none"> • Expertise on software evaluation with a vast knowledge base of over 1000 applications • Infosys award-winning processes and frameworks help you optimize the application management life cycle
	Lowered TCO	<ul style="list-style-type: none"> • The Infosys Global Accelerated Deployment factory ensures effective deployment of skilled resources. • Ease of use and maintenance reduces TCO in the long term
	Strategic Alliance	<ul style="list-style-type: none"> • A Microsoft Global Systems Integrator and Gold Partner • Infosys has early access to new products and releases • Leverages industry frameworks like MSF, ITIL, etc
	Support & Maintenance	<ul style="list-style-type: none"> • We leverage the Infosys pioneered Global Delivery Model to provide support and maintenance at any place across the globe • Reduced support and maintenance costs due to virtualization
	Platform Independence	<ul style="list-style-type: none"> • Application bubbles are mostly OS platform independent • Platform independence will help your IT prepare for the next OS upgrade and minimize migration costs
	Innovative Tools	<ul style="list-style-type: none"> • Infosys uses proprietary tools for Application Virtualization feasibility testing and also provides a ready-made dashboard for project reporting

Solution Overview

Infosys App Virtualization Solution (AVS) transforms the IT infrastructure to a centrally managed, dynamic (mobile), highly scalable, available and secure environment with a reduced cost of operations. This innovative approach to application management is faster to implement, highly secure and more affordable than other contemporary technologies. Solution highlights beneficial to organization's are -

Benefits of Infosys's Alliance with Microsoft

"Microsoft's long term focus on delivering an integrated, manageable and reliable platform, combined with Infosys' unique delivery model and deep consulting skills, is designed to help customers succeed and grow through increased efficiency, cost savings and business value" – Steve Ballmer, CEO, Microsoft Corp.

Catalytic IT

Catalytic IT enables enterprises to transform their business by leveraging IT as a catalyst. The portfolio of Microsoft Technology integrated solutions and services under catalytic IT enables enterprise businesses and their employees to realize a simplified and flexible IT environment that lowers the total cost of ownership and help Win in the Flat World.

Allied services

Solution Consulting for Enterprise-wide Rollouts

Identify your organization's current maturity level for desktop/server IT infrastructure and define a standard operating environment to enhance agility, availability and performance, and reduce TCO of operations.

Server Consolidation

Optimize your enterprise platform and transform it into a flexible, homogeneous platform and support business objectives more reliably. Our solution also helps you address the key challenges of utilization, availability, security, manageability, and optimization of IT infrastructure.

Security Services

Integrity of information is vital to business. Data and information are key corporate assets. This service helps you protect assets from theft and loss. It covers the entire security lifecycle — from developing security strategy to managing security.

Application Factory

Factory approach to application and database standardization, includes porting (VB to .NET migration), compatibility, application packaging, MS Access database consolidation, and database migrations covering Sybase, SQL Server and Oracle Database Systems.
