

Document Title

To remain successful in the backdrop of complex market dynamics, critical assets belonging to your organization have a direct and significant impact on corporate performance and profitability. Organizations across multiple verticals have implemented and utilized Maximo or other 'best-of-breed' products for effective asset management. Waves of changes brought in by deregulation, globalization, restructuring and changes in environmental and safety norms have further increased the importance of effective Enterprise Asset Management (EAM) to drive higher corporate performance. In this complex and challenging business environment, you need to proactively evaluate your EAM systems with respect to following:

- Can timely upgrade of MAXIMO or consolidation of other Enterprise Asset Management systems help your organization avoid business continuity risk that may arise due to discontinuation of support from product vendors?
- Do disparate EAM systems inherited from different acquisitions act as a bottleneck for your organization in maximizing the operational goals and providing complete visibility of all critical assets across business units?
- Will the present EAM system landscape inhibit your organization to comply with changing safety and regulatory environments?
- Does the decision to upgrade and consolidation of EAM systems put you in doubt regarding quicker return on Investment?

Infosys can help you answer these questions and formulate a plan of action to meet your business goals. With a unique assessment-based approach, Infosys EAM practice assures you of a seamless upgrade experience utilizing our EAM practitioners' successful track record of executing complex projects by leveraging the Infosys pioneered Global Delivery Model.

Upgrade Solution Methodology

Our solution differentiator

- Infosys upgrade solution directly upgrades Maximo 4.x / Maximo 5.x to Maximo 6.x avoiding the time consuming multi step and complex product vendor approach.
- Product based solution template approach helps to implement common business processes and also in rolling out best practices across the organization.
- Infosys Maximo upgrade methodology leverages the Global Delivery Model (GDM) to ensure faster go-live and quicker recovery of investments on Maximo upgrade projects. A phased approach, comprising multiple upgrade passes would help de-risk the project.

Key Success Stories

Infosys was involved in assessing the current system landscape, conducting feasibility study for system consolidation for all business units, providing migration & transformation strategy for migrating to MXES for one of the largest utility in Northern Europe. Infosys also developed business process design & detailing via use cases for the client's heat & power installation processes

Maximo upgrade was executed for an integrated energy company primarily focused on exploration & production of natural gas. Client was benefited by leveraging Infosys Global Delivery Model, implementing the entire procurement solution along with multiple customizations including a two-way interface with existing financial system.

Accelerator Tools

- Maximo Object Analyzer used to identify custom objects
- Data Mapping Tool used to map Maximo 4.x Objects to Maximo 6.x Objects
- Data segregation tool used to split Site specific Maximo 4.1.1 instance data to Multi Site MXES data
- Data Cleaning Tool used to consolidate & clean the Maximo 4.1.1 data before migrating it to MXES
- Data migration Tool-Effective usage of Maximo Enterprise Adapter (MEA) and Maximo interoperability framework
- Business Process Maps to quickly map business processes of organization to Maximo

EAM Practice at Infosys

- Strong EAM domain knowledge and over 2500 person months of experience in EAM domain
- MAXIMO package experience across multiple industry verticals like Energy, Utilities, Telecom & Transportation.
- Consultants certified by IBM as “Maximo 6 Deployment Consultants”
- Global solution partner with IBM
- Successful track record of executing complex, globally dispersed projects through GDM (Global Delivery Model)
- Strong credentials in Maximo 4.x and 5.2 and the latest version Maximo 6.0.
- Best practices defined by CoE (Centre of Excellence) are used to jump start EAM implementations & roll out, upgrade, support & enhancement.

Key solution benefits

- Template based approach helps in rolling out to additional sites and/or departments. This approach may also help in rolling out the solution to future acquisition
- Accelerators help in efficient template building, data cleansing and migration
- Efficient Consolidation of legacy systems to a single system provides real time visibility of organization wide assets
- Supports regulatory compliance and brings flexibility to incorporate changes
- Allows integration to latest technologies like Mobile Solution, GIS, RFID and ERP systems such as SAP and Oracle

Client Speak

They (Infosys team members) are exceptional experts in their field and have excellent work ethic to go with these skills.

We are very lucky to have such a great team of stars from Infosys. I am very proud of the work the entire team has done in getting us through Design. I am very proud to be part of such a great team. I am also very happy with Infosys' leadership with us on this project.

- Program Manager, Global MAXIMO Program, Oil & Gas Major
