

# MAKE THE SWITCH TO CLEANER

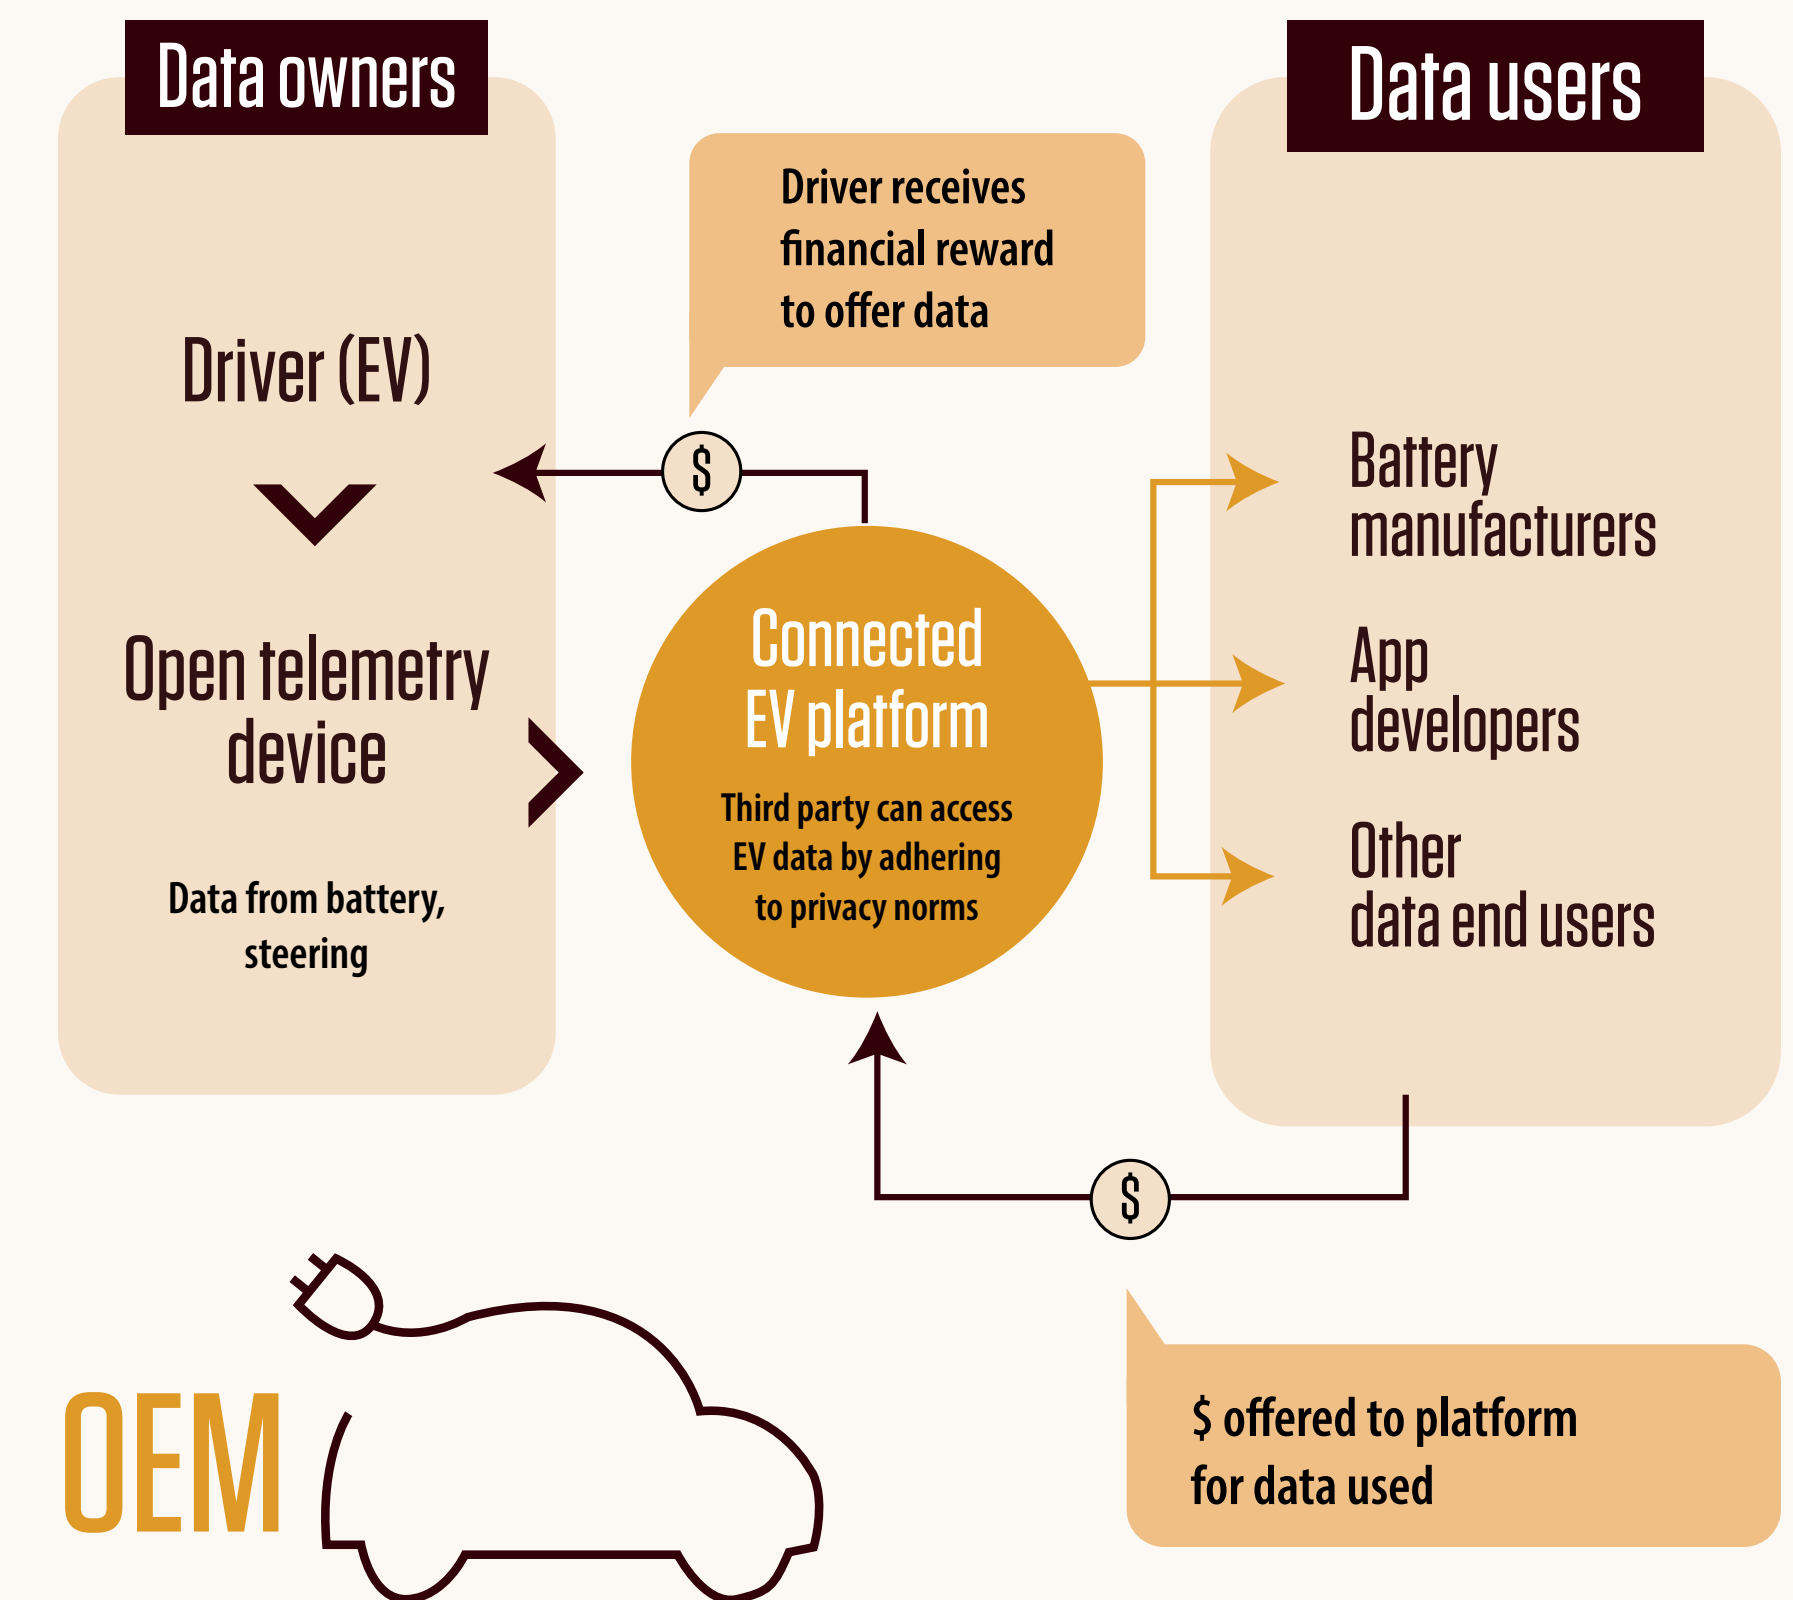

## Sustainable Transportation for Energy Transition Now

To reduce their carbon emissions, companies need to switch to sustainable transportation. But the shift isn't easy. That's why they need a partner who can help.

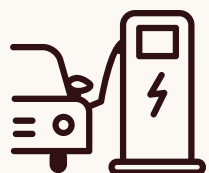

# THE ECOSYSTEM OF ELECTRIC TRANSPORTATION

EVs make it possible for enterprises to create opportunities for different stakeholders by connecting information to innovation. So companies can optimize their operations while they go greener.

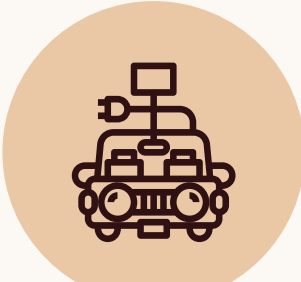

# SOLUTIONS THAT DRIVE SUSTAINABILITY

Infosys' offerings help you manage the journey end-to-end, enabling EV adaptability throughout the ecosystem.

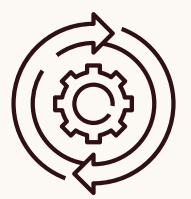

-  Charging Infrastructure Management
-  EV Energy Management
-  EV Customer Management
-  EV Fleet Management
-  Payment and Billing Management
-  EV Consumer Analytics
-  EV Grid Integration
-  Usage Visualization, Forecasting and Analytics

# DRIVE TOWARD DESTINATION DATA

Infosys integrates data from diverse sources, devices and systems to unravel business insights, allowing businesses to make more informed decisions and operate more profitably with:

-  **Sustainable Logistics**  
Planning, commissioning, onboarding and supporting EV charging infrastructures
-  **Fleet Electrification**  
Economic optimization of charging, incorporating energy supply costs and analyzing upstream value chains
-  **Utility EV Enablement**  
EV onboarding solutions for utilities, planning grid capacities and managing grid operations

# CHARGING AHEAD WITH SUSTAINABLE TRANSPORTATION

-  Plan and build digital capabilities to scale with speed and cost-effectively
-  Create the data and analytics foundation to improve financial viability through an energy mix optimization
-  Take an end-to-end view of the charging ecosystem across energy management, charge management, and customer management to simplify an inherently complex area
