

## Risk-Based Monitoring (RBM), a mechanism to optimize clinical trial monitoring process

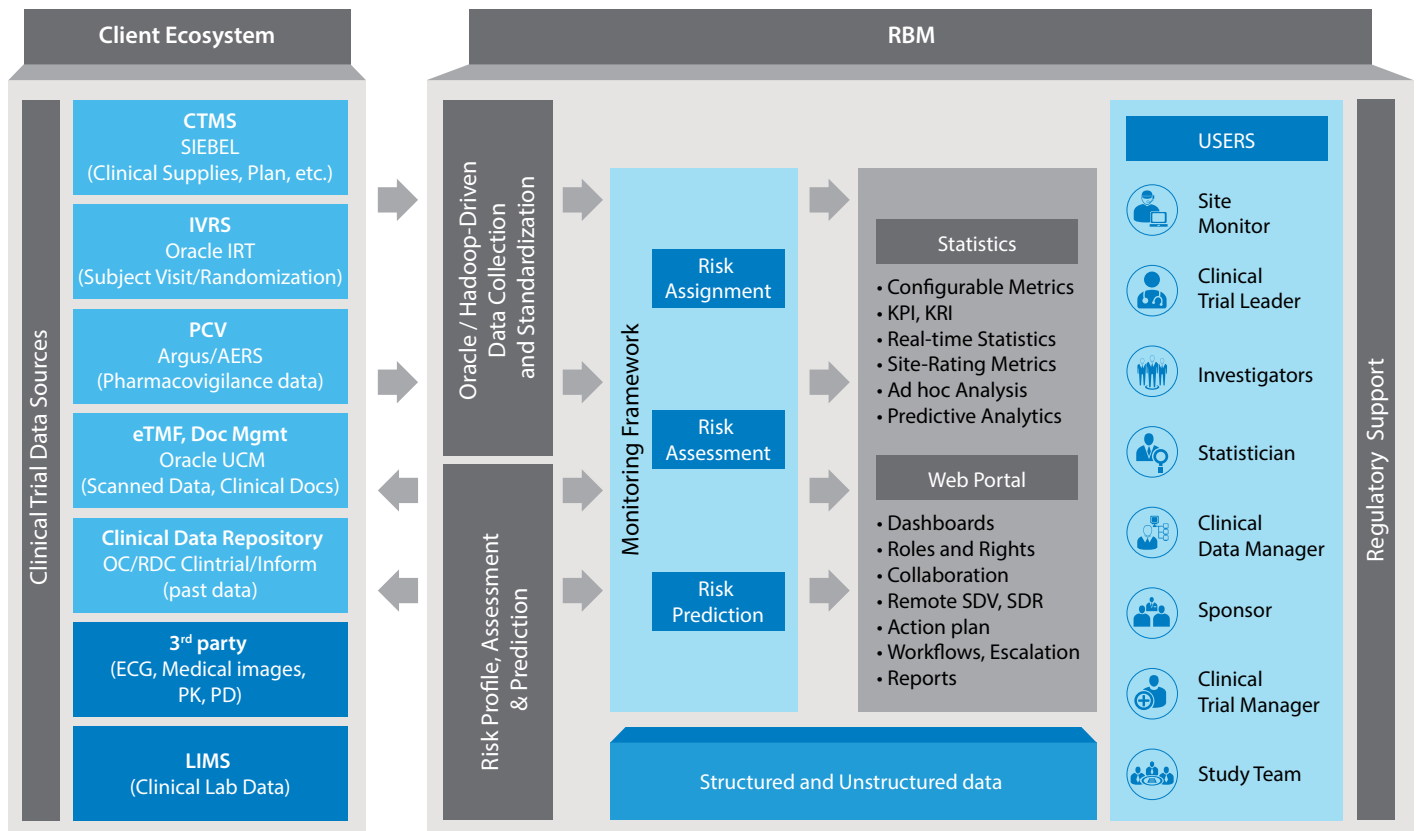

Life sciences organizations are faced with a multitude of challenges:

- Increased pressure on pharmaceutical companies to improve time-to-market and optimize cost
- Pressure to lower cost of clinical trials without compromising on quality
- Need to improve efficiency of the entire clinical trial monitoring value chain and reduce 100% dependency on Source Data Verification (SDV).
- Need to improve visibility into different dimensions of study-data

**The Infosys RBM solution** attempts to improve the clinical and commercial success for life sciences organizations. It helps organizations to focus on critical study-parameters and relies on a combination of remote and onsite monitoring. The solution has built-in predictive analytical capabilities, and uses statistical modeling and machine learning techniques to provide early insights into risks for a variety of predetermined categories for the ongoing trials.

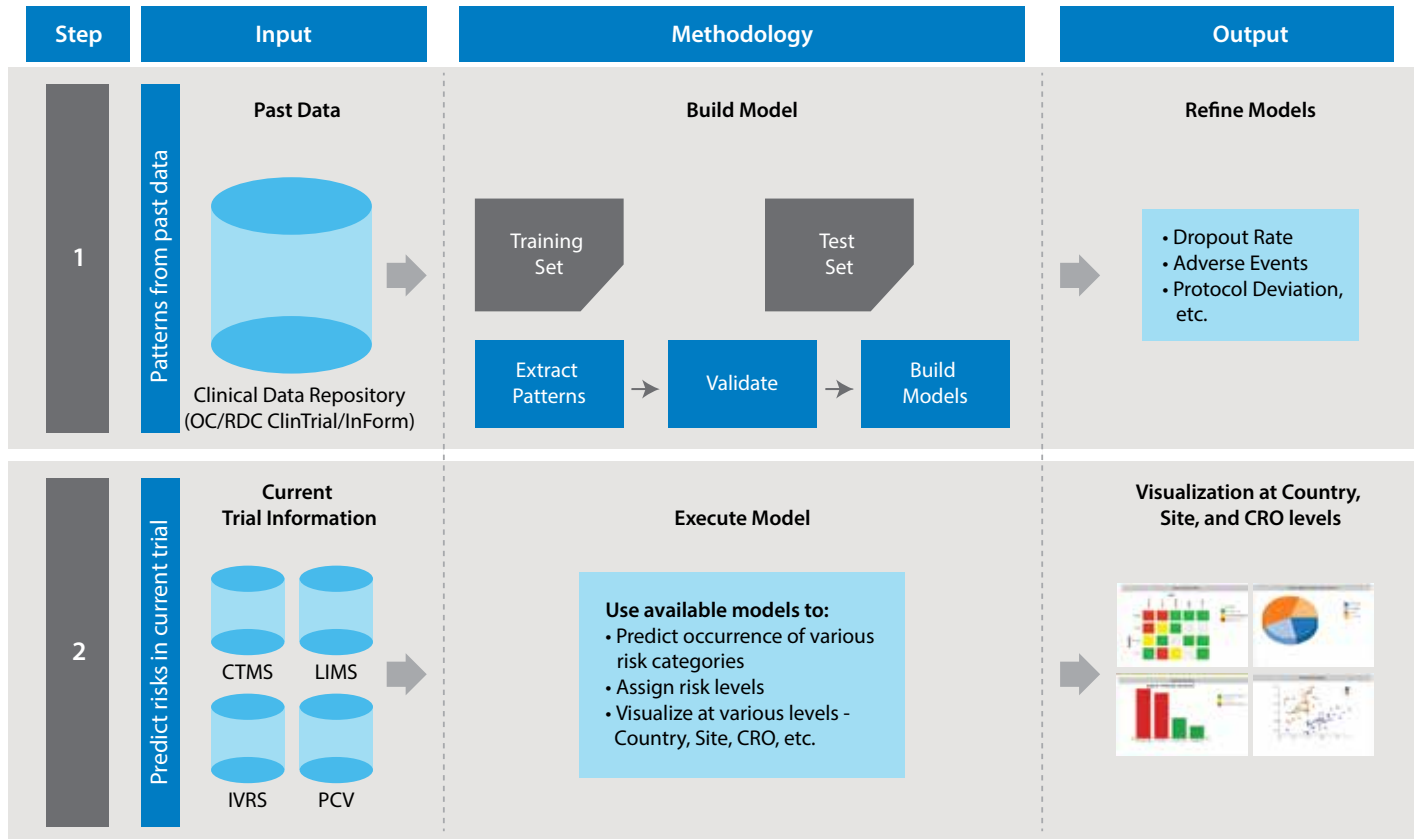

### Salient features:

- Uses risk-based, critical data focus
- Central/near real-time monitoring
- Predictive Analytics driven by pattern matching, machine learning, and clustering algorithms
- NLP-based components used to mine text and extract relevant data from past reports, both structured and unstructured
- Visualization Engine to provide better insights into the data analysis
- Technology solution scalable, extensible, and with the ability to process large amounts of data

## Predictive Analytics of Risk Management

The predictive analytics component extracts data from clinical data repository. It uses pattern matching, statistical modeling, and machine learning methods to build appropriate models for predetermined categories that need to be predicted, for example, patient dropouts. During model execution, data for ongoing clinical trials is acquired and used for predicting the outcome of different risk categories (site, demographics, dropouts, etc.)

### Solution Benefits

- Allows early diagnosis of risks during design, conduct, and close out of clinical interventional studies
- Pulls in data and metrics from trial management systems, CDM systems, as well as Safety management systems, offering a 360° view of risks
- Reporting of risks during trial conduct (study, site, and patient levels) that helps in recalibrating the risk profile of a site
- Predictive analytics engine to support clinical trial risk management

### About Infosys

Infosys is a global leader in consulting, technology, outsourcing and next-generation services. We enable clients, in more than 50 countries, to stay a step ahead of emerging business trends and outperform the competition. We help them transform and thrive in a changing world by co-creating breakthrough solutions that combine strategic insights and execution excellence.

Visit [www.infosys.com](http://www.infosys.com) to see how Infosys (NYSE: INFY), with US\$8.25 B in annual revenues and 165,000+ employees, is helping enterprises renew themselves while also creating new avenues to generate value.
