

NAVIGATE YOUR
NEXT ON SAP
DIGITIZATION
THROUGH AGILE
AND DEVOPS
SERVICES FROM
INFOSYS

Digitization has become the strategic differentiator that spurs organizations to achieve higher business growth. Most organizations know this and, today, many of them are already digital or are planning their digital transformation journeys. According to an independent research firm, digital marketing spend will increase to US \$146 billion by 2023 from an original estimation of US \$103 billion by 2019¹.

As a technology provider, SAP has been a front-runner in adopting digital technologies. SAP's latest products S/4HANA and Focused Build bring together new digital technologies to drive business transformation. However, many enterprises want faster ways to deploy these products, so they can quickly achieve the benefits of business process automation and digital transformation. Thus, service providers must adopt an agile way of service delivery along with process amplifiers such as DevOps to help companies accelerate deployment of new SAP products.

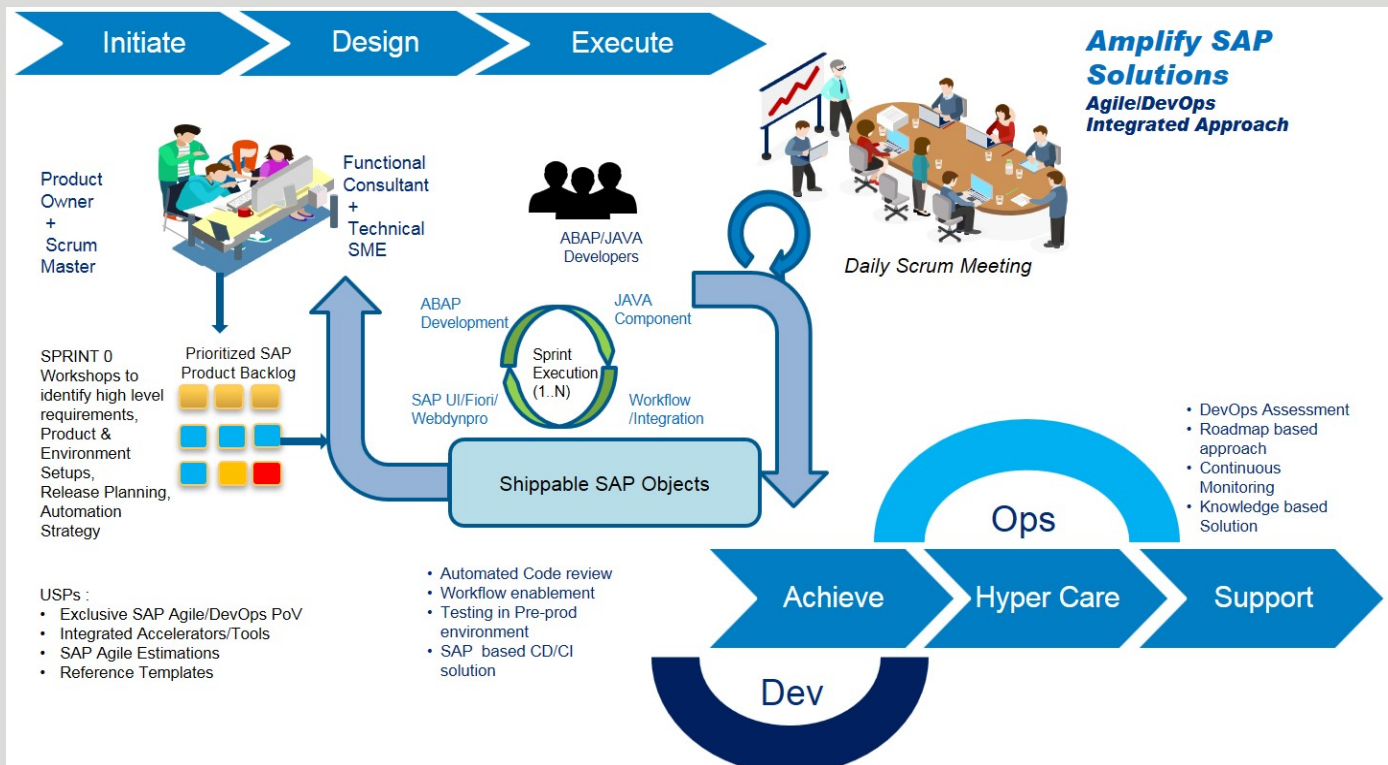

Accelerate your agile journey with Infosys

An end-to-end structured methodology

Infosys' integrated agile and DevOps service offering helps enterprises simplify their SAP business agility journey. Our structured and comprehensive agile methodology focuses on core process transformation and is designed to meet the needs of SAP-specific solutions for implementations, rollouts and enhancements.

Infosys' SAP-specific DevOps assessment framework helps enterprises create a roadmap for seamless migration from traditional waterfall models to the agile model. Our SAP-based estimation template measures agility in the enterprise's existing environment by incorporating sprint-based velocity measurement. This allows customers to measure progress sprint by sprint and plan for subsequent improvements in their SAP delivery journey.
