Cloud is raining opportunities everywhere

Cloud is redefining the way business and IT services are delivered and consumed. Moving to the Cloud is no longer a question of ‘when’ but ‘how’. Organizations today do not ask whether ‘they should take to the Cloud’. Instead, the question is: ‘What is the right approach to maximize business value from the Cloud?’

Lack of a single point of accountability

Unclear SLAs

Multiple pricing models and contracts

Moving to the Cloud can be challenging. As you go through the Cloud adoption journey, you must choose between and partner with multiple Cloud providers for infrastructure, platforms, and applications. Each will offer differing levels of functionality, transparency, support, and security capabilities. Stitching these together and tailoring them to align with your business context is a daunting prospect. The result? You may not reap the right business value from the Cloud.
