# The definition taken for this panel

*Artificial Intelligence is an area of computer science that emphasizes the creation of intelligent machines that sense, comprehend, reason and act to emulate human behavior. Some of the activities that computers with AI are designed for include image and speech recognition, learning, planning and problem-solving. Examples of applied AI technologies include (but are not limited to): machine learning, deep learning, predictive/prescriptive analytics, virtual agent and natural language understanding technologies (Siri, Alexa, Google Home, Amelia etc.).*
