

# CLINICAL QUALITY MANAGEMENT SYSTEM

## Industry Need

Clinical studies are becoming increasingly complex because of intricate protocols, adaptive trial design, disparate applications and non-standardized processes. This impacts the quality of clinical data and introduces additional risks for clinical development and research participants, resulting in:

Delays in delivering new medicines to patients

High cost of clinical development

Increased health authority and sponsor's time and resources

## Infosys Solution

Infosys Life Science practice is leveraging the TransCelerate framework along with Pega's Business Process Management (BPM) tool to create a clinical quality management system framework, which can integrate with your existing clinical system to churn out trustworthy data.

Enterprise-wide clinical quality, risk management and SoP automation

TransCelerate Clinical QMS framework

Pega BPM foundation for flexibility, extensibility and reuse

ICH Q9 and ICH E6 compliant

Modular approach for easy integration

Knowledge management integration

## Outcomes

Below are some of the key value propositions for Infosys Clinical Quality Management System:

Dashboard-driven unified quality and risk management

Assurance of data quality, integrity and audit readiness

Improving issue identification and management across the enterprise

Increasing oversight and timely intervention across clinical trial ecosystem
