

Vendor Management, the Infosys Way

The growing dependency of enterprises on third-party providers or vendors for supply of raw materials, resources, and services has increased the need for effective vendor management methods to control the quality and cost of the end product. This requires intensive vendor research in terms of price, quality, turnaround time, reputation, and references from

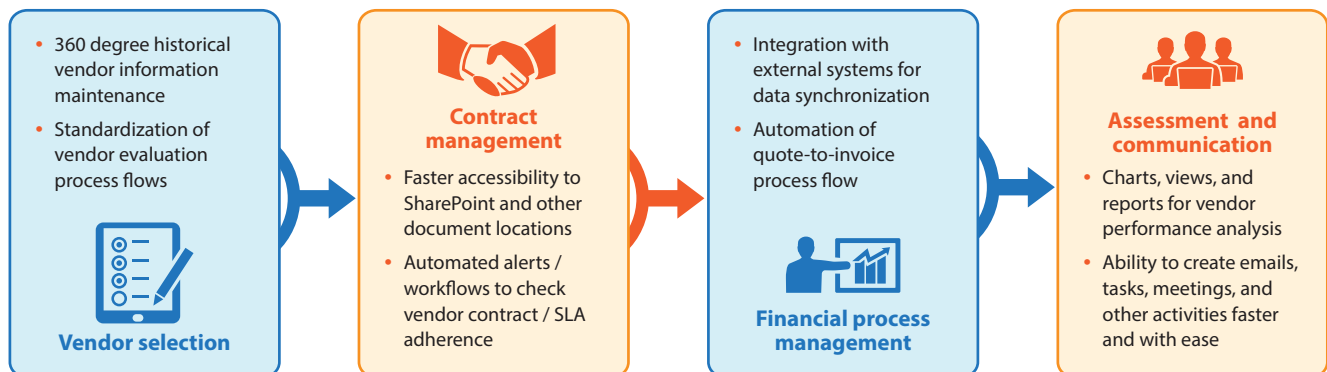

other enterprises to select a suitable vendor. Large enterprises have dedicated departments for managing vendors but medium or small businesses merely have a few personnel for this task. Hence, an application that can manage the vendor's complete information, provide reports or dashboards to evaluate vendor performance, simplify document and

project management, and provide methods for easier communication is most desired.

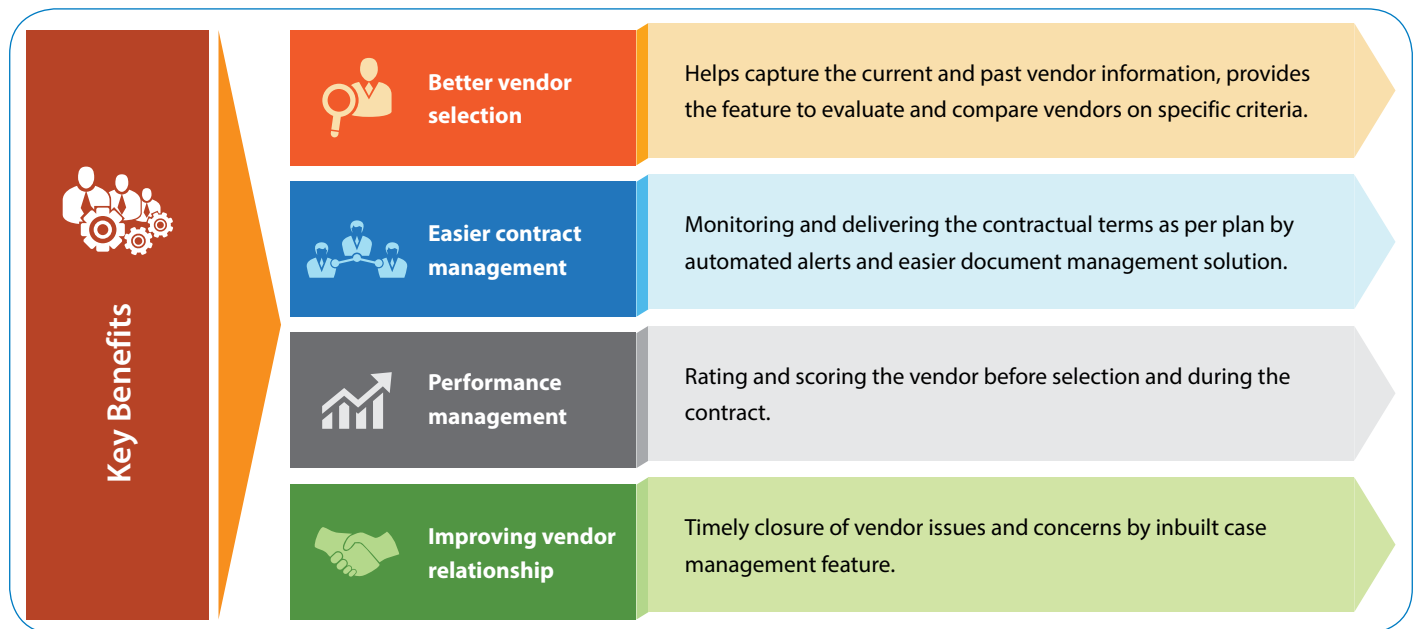

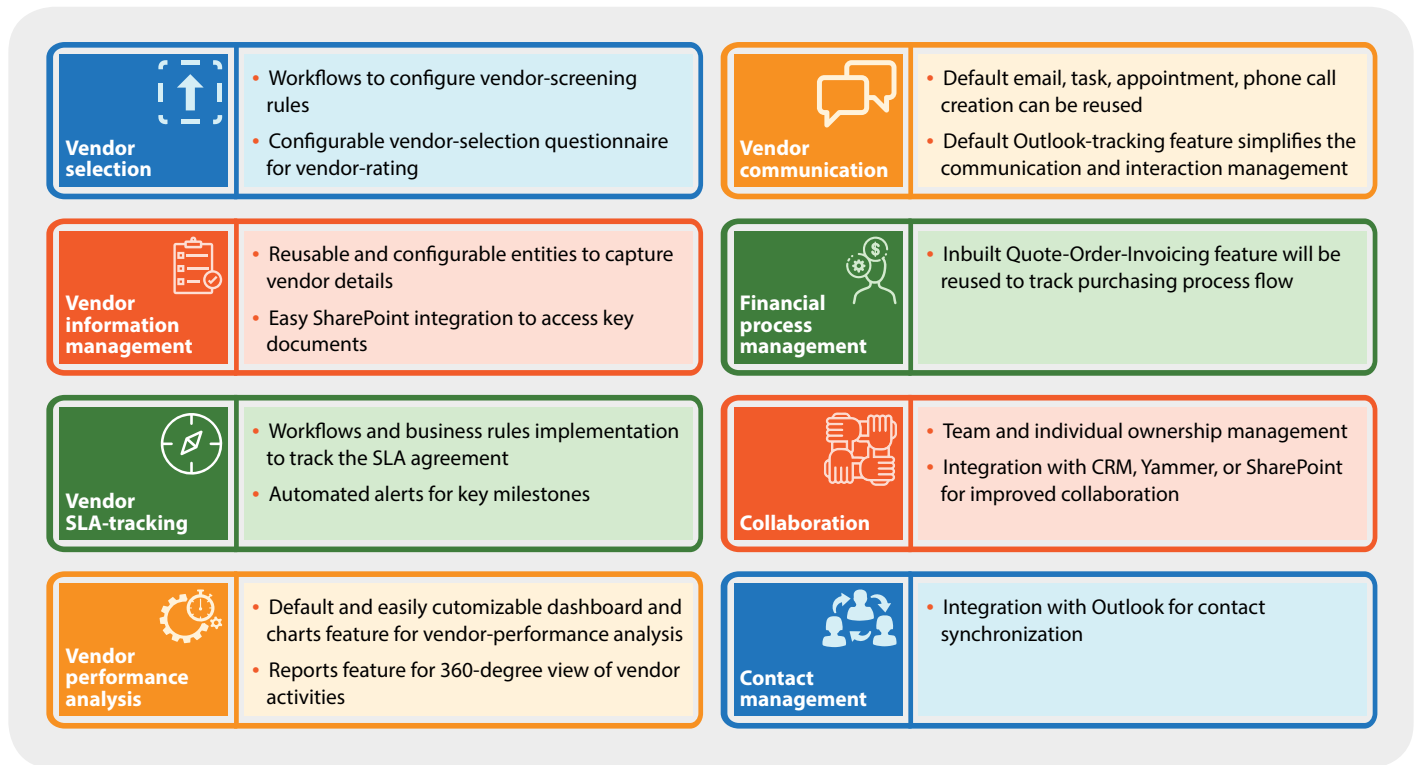

The Infosys Vendor Management Solution is an answer to the demand for an effective and simple application for building vendor relationships and managing them efficiently.

Vendor Management Solution (VMS)

The Infosys Vendor Management Solution (VMS) is based on Microsoft Dynamics CRM which offers smart features to accomplish processes such as vendor selection, contract management, financial process management, vendor performance assessment, and communication.

This solution will result in enabling the procurement and vendor management personnel to efficiently and effectively manage relationships with vendors, deriving the best from their services as per the contractual agreement. Moreover, the application provides an easier way to track the concerns and issues raised by vendors.
