The GDPR deadline is closing in – Are you ready?

Are you aware that the scope of GDPR extends to any organization that deals with the personal data of EU residents – be it financial, employee, or customer data? This means that any organization in any industry across the globe that captures or processes such personal data will be required to be GDPR-compliant before May 25, 2018. Comprising over 173 regulations and 99 articles, GDPR includes mandates, repeals, exceptions and responsibilities for all organizations to ensure that such data is protected. If your organization falls within this scope, you need to prepare for significant changes in how your enterprise manages its cloud applications, enterprise documents, core processes, etc.

To help organizations become GDPR-ready while securing their business, Infosys has designed a unique GDPR offering. It leverages the Infosys framework for GDPR - Assess, Define and Design, Administer and Implement, Manage and Secure. This framework derives key questions and drivers for compliance from the standpoint of GDPR’s key focus areas, as mentioned in the official EU journal and helps organizations meet these requirements. As an end-to-end solution framework from assessment to security, the Infosys Framework for GDPR ensures your organization is GDPR-ready and can continue business that involves EU residents’ personal data.

In today’s age where data is everything, data protection laws are critical to secure the rights of people. The European Union (EU) is leading the way with its new regulation called General Data Protection Regulation (GDPR) issued in 2016. The GDPR not only repeals Directive 95/46/EC across all 28 EU member states but aims to fortify data protection for EU residents – no matter where the data resides.

Your organization could be in the GDPR net

Are you aware that the scope of GDPR extends to any organization that deals with the personal data of EU residents – be it financial, employee, or customer data? This means that any organization in any industry across the globe that captures or processes such personal data will be required to be GDPR-compliant before May 25, 2018. Comprising over 173 regulations and 99 articles, GDPR includes mandates, repeals, exceptions and responsibilities for all organizations to ensure that such data is protected. If your organization falls within this scope, you need to prepare for significant changes in how your enterprise manages its cloud applications, enterprise documents, core processes, etc.

Secure your business in the EU with Infosys

To help organizations become GDPR-ready while securing their business, Infosys has designed a unique GDPR offering. It leverages the Infosys framework for GDPR - Assess, Define and Design, Administer and Implement, Manage and Secure. This framework derives key questions and drivers for compliance from the standpoint of GDPR’s key focus areas, as mentioned in the official EU journal and helps organizations meet these requirements. As an end-to-end solution framework from assessment to security, the Infosys Framework for GDPR ensures your organization is GDPR-ready and can continue business that involves EU residents’ personal data.
Service Offerings – Enable organizations with GDPR’s Key Action Items

**GDPR Offerings**

- **Planning and Road Map**
  - Establish a framework of assessing, reviewing, and monitoring data processing procedures, aiming to minimize data processing and retention of data, and building in safeguards

- **Readiness Assessment**
  - Structured assessment and systematic validation of existing data processing and retention solutions
  - Analysis and recommendations on planning, governance, process, culture, data, and technology

- **Information Life Cycle Management**
  - Re-engineer the data life cycle process to improve quality and reduce compliance/security risks
  - Devise a framework to handle the vastness, technical complexity, and international character of the data and information landscape

- **Organizational Set Up**
  - Assess the maturity level of the current governance implementation
  - Create the data protection organization structure
  - Identify policies to be implemented organization-wide
  - Change management strategy

- **Technology Solutions**
  - Identity and access management
  - Information security
  - End-to-end implementation
  - Tool evaluation
  - Preventive and detective controls recommendation

- **Advisory**
  - Strategy and frameworks to modify processes to be GDPR compliant and at the same time to minimize impact to business
  - Privacy impact assessment design
