

Delivering Improved Patient Healthcare Outcomes

The healthcare industry is in a state of flux. A major part of it is fueled by the demand to integrate technology into healthcare offerings. Today, mobile-based apps enable

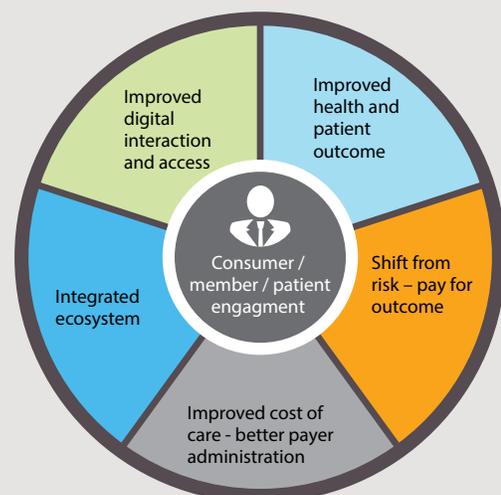

healthcare providers to share crucial information with patients. Social media platforms connect patients, healthcare providers, and insurance companies.

Cloud computing, big data analytics, and machine learning offer new approaches to create value and address market inefficiencies and challenges.

Enabling effective patient engagement through digital integration

By adopting digital, healthcare companies can ensure better cost of care (especially for patients with expensive treatment requirements), improve patient health outcomes, and understand population healthcare needs more effectively. They can also facilitate the development of an integrated ecosystem in which digital interaction is enhanced and a transition from risk to pay for outcome is possible.

How Infosys can help

Accelerate your innovation agenda, achieve strategic goals of increasing

market strength, and improve quality of care while making healthcare affordable

and accessible with Infosys healthcare solutions.
