

IDENTIFICATION OF MEDICINAL PRODUCTS

IDMP

Industry Need

Pharma regulatory compliance has been evolving from the days of SPL -> ADaM -> xEVMPD and now IDMP.

Data required for IDMP has to be sourced from multiple structured and unstructured sources, spanning centralized and localized systems. The key is to integrate disparate data sources from systems like those shown below for systematically achieving IDMP compliance.

Infosys Solution

Infosys IDMP solution creates a single version of truth of product information which can be used by various stakeholders in R&D, regulatory, medical affairs, manufacturing, commercial and compliance by leveraging below tools.

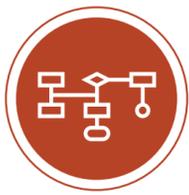

Master Data Management

Structured Content Authoring

Natural Language Processing

Algorithm

Data Extraction / Mining and Enrichment

Change Management towards Sustained Compliance

Outcomes

Staying ahead of evolving IDMP compliance

Achieving harmonized product definitions

Substance, product, organization and referential master data

Compliance with ISO standards 11238 , 11239, 11240, 11615 and 11616

Strategic data governance

Reducing manual effort of entering data through bulk upload interfaces
