

Infosys Helix Solution

Enterprises are establishing collaborative environments and using the information available through such systems to gain strategic and operational efficiencies. To achieve this, organizations are exploring the possibilities of optimizing their ECM investments by integrating them with front end applications equipped with collaboration capabilities.

Helix is Infosys connector solution for interoperability of content between IBM Lotus Quickr and Enterprise Content Management systems like EMC Documentum or OpenText Livelink. This connector contains pre - integrated components which manage the functional, architectural and delivery aspects of a typical content management and collaboration tool.

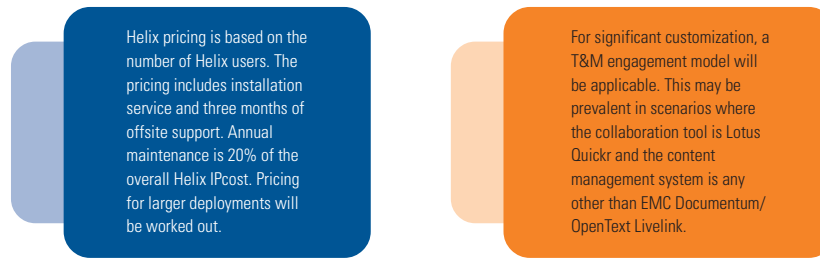

Infosys Helix offers complete document lifecycle management, provides a single point of information access to users and maximizes ROI through optimum utilization of existing ECM investments. This is supported by components for providing out-of-the-box integration of Lotus Quickr with Documentum / Livelink, increasing extensibility and flexibility and doing metadata management, version control and bulk transfers of folders and documents across the two systems.

Solution Overview

Engagement Models

Infosys proposes the following models of engagement for implementation of Helix:

Collaboration with IBM

Infosys and IBM are global alliance partners committed to create the differentiators in our services to the customers with unique business solutions through Infosys experience and IBM technology. Helix is one such example of joint value creation where we have collaborated.
