Cephren Partners with Infosys to Enhance Cephren's Collaboration and e-Commerce Framework for the Construction Industry

B2B Partnership Brings Together Advanced Integration, Development, and Deployment Expertise and the Establishment of Product Competency Center

Boston, MA – March 7, 2000 – Infosys Technologies Ltd., (Nasdaq:INFY), a leading IT consulting firm, and Cephren, key provider of online collaboration and e-Commerce services for the global construction industry, today announced a strategic partnership. Under the terms of the agreement, the partnership will encompass four primary collaborative areas: product development, quality assurance and maintenance, systems integration, and professional services. All four areas of collaboration will focus on leveraging Cephren's e-Commerce and project management services for large commercial construction projects.

Traditionally, a construction project involves hundreds of individuals from geographically dispersed firms, with no established process for communicating and collaborating. Cephren allows building professionals -- architects, engineers, developers, general contractors, sub-contractors and all of their materials suppliers -- to use the web to share documents, to collaborate on construction projects and to procure goods and services.

"Business-to-business eCommerce for the construction industry has witnessed tremendous growth. We are excited about partnering with Cephren, the leader in this area," commented Nandan Nilekani, President and COO for Infosys. "Our knowledge of the latest technologies, combined with the Infosys Global Delivery Model, provides rapid time-to-market and other significant benefits for Cephren customers," he added.

"Our partnership with Infosys allows us to leverage not only their systems integration expertise, but also their best practices approach to product development, quality assurance and maintenance," stated Ashok Segu, co-founder and Chief Technology Officer at Cephren. "By utilizing our combined strengths, we can ensure that our customers will receive enterprise-class e-Commerce solutions rapidly, efficiently and cost-effectively."

To support the partnership, Infosys will provide a product competency center (PCC) that will function as a virtual extension of Cephren. The PCC's eCommerce domain experts will manage all quality processes, including compliance with the Software Engineering Institute's (SEI) Level five requirements, protect intellectual property, ensure code perfection and customization, and offer 24x7 global support and coverage. The partnership with Infosys enables Cephren to address the exploding demand for its collaboration and eCommerce services by providing exemplary product development. Other partners for whom Infosys is currently providing product competency centers include Nortel, Lucent, NCR, EC Cubed and De La Rue.

About Cephren

Cephren is changing the way the world is built with its collaboration and ecommerce framework. Through its integrated, online collaboration and e-commerce services, the Company increases revenues, reduces risk and improves time-to-market for the global building construction industry.
