

Infosys Funds Research Center at University of Southern California

Center to Focus on Joint Research, Ph.D. Fellowships and Distance Learning

Bangalore, India & Los Angeles, USA - June 4, 2008: The University of Southern California (USC) Viterbi School of Engineering and Infosys Technologies, a global IT services and consulting company, today announced an agreement to set up an Infosys-supported Research Center at USC. The agreement was signed by Yannis C. Yortsos, Dean of the USC Viterbi School of Engineering and Kris Gopalakrishnan, CEO and Managing Director, Infosys Technologies.

"Infosys' global vision of engineering is compatible with that of the Viterbi School and the University of Southern California," said Yortsos. "This agreement will explore a model of interaction in research, education and training in areas of interest to both Infosys and USC. The collaboration will include joint research, bilateral visits by researchers, student internships and distance education, among other activities."

The agreement provides for the Center for Research & Education in Advanced Software Technologies (CAST) to be opened in the USC campus. Created with funding from Infosys, CAST will facilitate joint research and education in software architecture, service-oriented architecture and information integration, intelligent systems and agents, mobile and wireless systems, sensor networks and CAD frameworks and tools for hardware and software.

"The United States is the hub for innovation in science and technology," said Subu Goparaju, Vice President and Head, SETLabs, Infosys Technologies. "Through this collaboration we hope to work with the best and the brightest engineering talent in the world on innovative technology solutions. USC has among the largest number of international students of any U.S. university and the USC graduate program in engineering is widely acknowledged to be among the top 10 in the U. S."

This agreement is part of a larger Infosys program to engage with leading Indian and international universities to facilitate research in a variety of areas including software engineering, information management, knowledge engineering, game theory, and IP lifecycle management.

Infosys has been collaborating with academic institutions with its global internship program [InStep](#) and its industry-academia program [Campus Connect](#). Infosys has also been hiring university graduates from abroad, training them in India and sending them back to their home markets. Yortsos noted that the Viterbi School has more graduate students enrolled from India than any other country except the U.S.

"The Viterbi School is educating many Indian graduate students," said Yortsos. "I'm delighted with this new relationship with Infosys because of the significant promise to benefit both parties."

About Infosys Technologies Ltd.

Infosys (NASDAQ: INFY - News) defines, designs and delivers IT-enabled business solutions that help Global 2000 companies win in a Flat World. These solutions focus on providing strategic differentiation and operational superiority to clients.
