

Infosys BPO Receives PCI Data Security Standards Certification

Significant accomplishment for Infosys BPO since this an organization-wide PCI Compliance vis-à-vis a specific customer account PCI Compliance

Bangalore, September 15, 2010 – Infosys BPO, the business process outsourcing subsidiary of Infosys Technologies, today announced being certified compliant with the Payment Card Industry’s Data Security standards V1.2.1 (PCI-DSS). The certification affirms Infosys BPO’s commitment to a strong data protection and information management strategy and places it among a handful of 3rd party service providers around the globe to have achieved this distinction.

PCI-DSS is a comprehensive set of standards that require merchants and service providers that store, process, or transmit customer payment card data to adhere to strict information security controls and processes. The certification involves verification of the implementation of a number of mandated control objectives that are specific to technology design, network and physical data security.

“Infosys BPO is proud to be among a handful of organizations globally that are certified under PCI-DSS, one of the most stringent security standards globally”, said Srikant Balan, Head of Risk Management at Infosys BPO. “The certification is a natural outcome of the systematic procedures we have always followed and promoted to provide high level security while ensuring compliance for all clients.”

About PCI-DSS

Payment Card Industry Compliance has become one of the watch words of Information Security today. PCI Data Security Standard is developed by PCI Security Standard Council, a group of top card issuers in the world including Visa, MasterCard, Amex, JCB, and Discover. The standard is noted as one of the most stringent security standards in the world. The primary aim of the standard is to provide assurance that the cardholder information dealt by an organization is sufficiently secure and protected as per the stringent requirements of the standard.
