

SAP DATA ESTATE MODERNIZATION

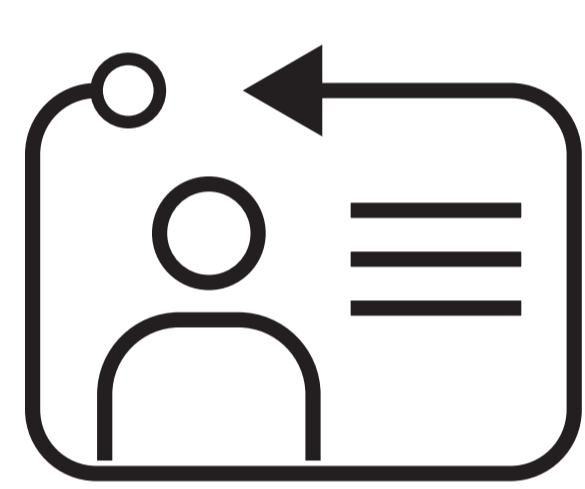

Seamlessly combine structured SAP data and unstructured data into a centralized, accessible data source to apply artificial intelligence and machine learning (AI/ML) and drive business intelligence.

DATA IS YOUR MOST VALUABLE ASSET

The speed of innovation has significantly grown with the availability of cloud-native analytics solutions, but often, SAP data and non-SAP data are siloed, making it challenging to see the full picture.

Amazon Web Services (AWS) provides a scalable, high-performance environment for data estate modernization, allowing enterprises to easily ingest structured and unstructured data, analyze business-critical data, and gain deeper insights.

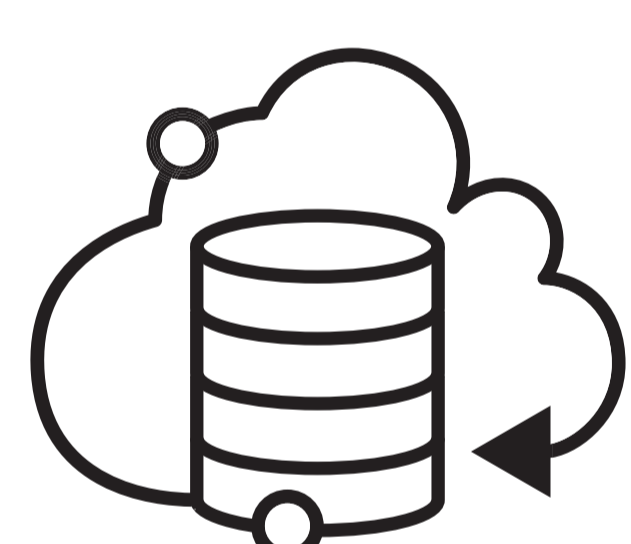

Systems of record identified

Structured and unstructured SAP, legacy system, and front-office system data are identified.

Data ingestion

Data is ingested through a number of tools like AWS IoT solutions, Amazon Kinesis, and AWS Glue.

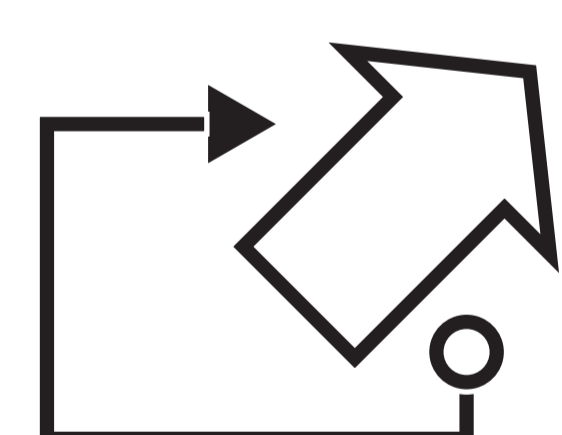

Data storage and processing

Data is sent to an enterprise data lake to be processed and cataloged before being moved to a data warehouse for querying.

Data analysis

Data is analyzed and visualized using a number of AWS cloud-native and third-party tools.

Fully modernized data estate

The result is a fully accessible, data estate that enables end users to derive and consume valuable insights and make more informed, data-driven optimizations to drive competitive advantage.

Accessible data in a modern, cloud-native environment helps reduce overall costs, improve business agility, and free up resources to focus on new business initiatives, instead of managing data infrastructure.

INFOSYS DATA ESTATE MODERNIZATION ON AWS

Infosys, an APN Premier Consulting Partner and SAP Global Services Partner, uses an end-to-end, phased approach to SAP data estate modernization, creating a unique architecture to fit each customer's needs. Infosys SAP Data Estate Modernization is part of the [Infosys Cobalt](#) portfolio of offerings.

Leveraging SAP solutions on AWS, Infosys works with customers to develop a modernization strategy, design a plan, provide platform engineering, and optimizations post-modernization.

With end-to-end data estate modernization architecture proprietary knowledge, methodologies, tools, and accelerators, Infosys enables successful SAP migrations to AWS.

Read our whitepaper to learn how you can modernize your SAP data estate or contact us to register for a preliminary workshop.
