The digital world

poses new challenges for the enterprises to maintain a robust cyber posture and ensure digital-trust

Digital transformation has become highly critical and immediately necessary for business success. For a majority of the enterprises, who did not start their journey as a digital-native, navigating through this digital world can be highly complex and overwhelming.

To minimize business continuity risks enterprises must adopt and adapt to their digital demands sooner, but doing so they are expected to expose themselves and their digital assets to cyber-attacks. This transformation comes with a huge cost

of managing cybersecurity proactively. Enterprises must safeguard themselves against lack of visibility, high cost of securing the enterprise, risks which may hinder adoption and securing newer technologies and business models.

However challenges such as inability to have security embedded in their technology architecture, shortage of skilled personnel and never ending battle against evolving threat vectors make the task at hand difficult.

We believe enterprises must build a 3-point agenda. First, ensure cyber resilience by embedding security into their enterprise fabric. Second, build scalability and efficiency in their cybersecurity program. Finally, secure against emerging threat scenarios.

Infosys has a proven approach to secure the digital enterprise.

67%

Unable to have security embedded in their technology architecture

49%

Face shortage of skilled personnel

63%

Battle with fast paced change in cyber technology

Our partnership promises enterprises to assure digital-trust

Secure by Design

We ensure enterprises are 'Secure by Design' by embedding security at the foundation stage of their business lifecycle. We focus on driving an enterprise awareness and culture to build IT systems, security architecture, platforms and solutions based on secure-by-design principles thereby ensuring confidentiality, integrity, and availability to deliver an out-of-the-box experience for users. We minimize risk by reducing the attack surface and employing robust defense mechanism that is extremely difficult to exploit. We maximize visibility of the security landscape through comprehensive and intuitive dashboards while ensuring compliance with industry standards, policies and processes.

Secure by Scale

We are committed to building a resilient cybersecurity program and drive our customers to operate at scale while increasing operational efficiency and reducing costs. Our scalable, AI-ML based managed detection and automated incident response platform, that enables integrated and optimized incident monitoring and orchestration, helps prevent, detect and respond to advanced cyber-attacks. With our strong team of security experts, academic collaborations such as those with Purdue University, industry leading practices, automation, deep industry insights and actionable intelligence, as well as noiseless delivery of managed security services through global cyber defense centers, we are ready to scale our customers' digital journey and magnify the security posture.

Secure the Future

We help enterprises prepare for the future by proactively building newer technology solutions through continuous research and innovation that cater to cybersecurity needs in the age of emerging technologies such as IoT, Blockchain, etc. We invest in constantly improving our competency and core services portfolio, expanding our offerings to address new areas of potential threat, and leveraging our innovation ecosystem to co-create solutions that deepen the value we deliver. Our clients also have access to advanced threat-hunting capabilities, forensics, malware analysis, endpoint detection & response (EDR), user & entity behavior analytics (UEBA) as well as the latest technology innovations incubated in the Infosys Security R&D labs.

We deliver

our promise across the cybersecurity lifecycle

Diagnose

We meticulously diagnose your IT value chain across Build-Plan-Run. Our consulting services seek to determine your cybersecurity readiness and maturity by assessing, analyzing and reviewing your security landscape to develop an enterprise wide cybersecurity strategy.

Design

We chart an enterprise-scale cybersecurity transformation strategy, frameworks and blueprint for your business based on our assessment. Further, we design and architect the most robust and future ready cybersecurity suite customized for your security landscape.

Deliver

We evaluate, customize, setup and integrate tools required to support your cybersecurity posture and mitigate any existing vulnerabilities. In addition to creation, validation and iteration of proof of concepts to arrive at optimal tools portfolio and integration plan, we also deliver industry leading processes, systems, training, governance structures, and performance metrics. Further, we will manage your tools portfolio in an ongoing basis.

Defend

We help you defend against all attacks – current and future. In order to maintain, monitor, and govern your cybersecurity posture, we also help you defend your cyber posture ensuring minimal intrusion and disruption.

Our suite

of integrated lifecycle services help you maintain and monitor enterprise cybersecurity posture

Cyber Advisory Services

We advise our clients to navigate their cybersecurity risks with robust strategy and frameworks to assure digital-trust

Governance, Risk and Compliance

Our GRC solutions help organizations to effectively and efficiently govern risk, maintain compliance and improve decision making in a constantly evolving business and regulatory environment

Identity & Access Management

We enable our clients to build, operate and evolve their identity lifecycle and governance processes with risk based intelligent authentication and authorization across the digital ecosystem

Data Privacy & Protection

We enable our clients to improve visibility and control of sensitive data in compliance with regulatory and business requirements

Vulnerability Management

We enable our clients to strengthen their security posture by identifying, prioritizing, tracking and eliminating security weaknesses across threat surfaces

Infrastructure Security

We help our clients to enhance their cyber defense by bringing cybersecurity skills-at-scale and deploying best in class protection controls and operational capabilities

Cloud Security

We help our clients to secure their cloud migration and transformation journey to build a cyber resilient and compliant cloud eco-system

Emerging Technologies

We help our clients to minimize the risk surface in their IoT, OT, Blockchain, RPA and other emerging technological initiatives by embedding security controls into design, implementation, risk assessment and manage the security operations

Threat Detection and Response

We help our clients to strengthen their ability to detect and manage security incidents with a robust and integrated architecture and automated process

Managed Security Services

We help our clients to continually improve cybersecurity maturity by leveraging our global network of Cyber Defence Centers powered by advanced security platform

We bring

unique advantages to address your cybersecurity landscape and defend you against current and future threats

 Cyber Defense Centers (CDCs)	 Innovation	 Partners	 Platforms	 Skills
<p>Global network of CDCs for round the clock monitoring and defending against attacks</p>	<p>Innovation hub consisting of R&D labs and collaboration with universities</p>	<p>Leading industry partner ecosystem that helps Infosys cybersecurity diagnose and defend</p>	<p>Modular and integrated platforms to help design your cybersecurity solutions with scale</p>	<p>Collaboration with Purdue University and Mysore Centre of Excellence to provide intensive cybersecurity training to upskill and reskill</p>
