Overview

With operations and data rapidly shifting to the cloud, organizations face a mammoth challenge of continuous governance and adhering to compliance across cloud and hybrid infrastructure, especially related to identity and access.

As identity has become the core of cybersecurity, security controls for identity management and access governance are now considered as strong and trustable tools for organizations.

The industry is currently facing a few grave challenges such as:

Infosys Identity as a Service solution (IDaaS), powered by Saviynt IGA, is a strong solution for enterprises, to establish a true identity-driven security and cyber access governance model.

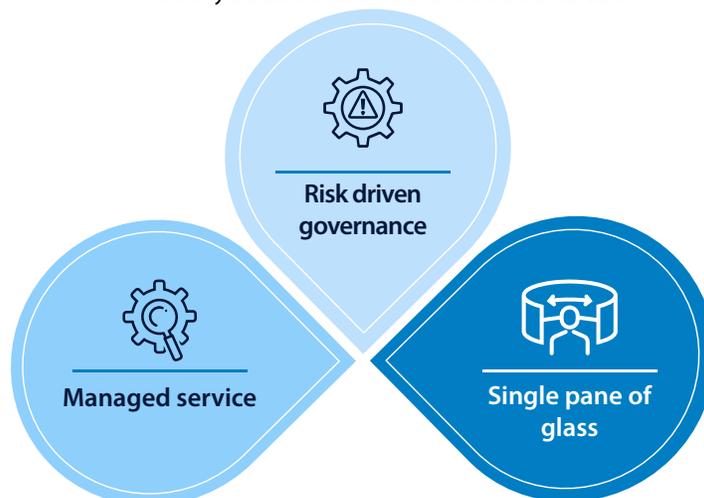

With our strong strategic and technical partnership with Saviynt, we offer frictionless delivery of identity and access governance solutions.

Infosys IDaaS Powered by Saviynt IGA

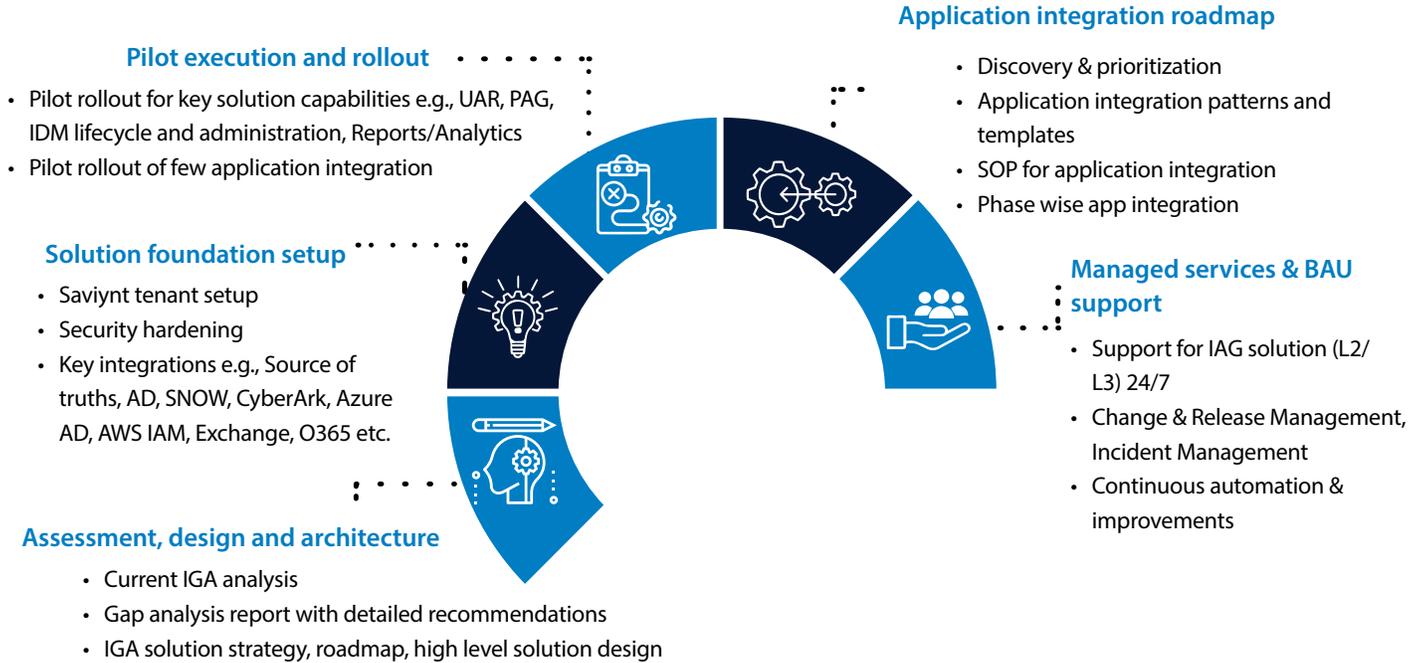

- Identify risk presented by identity across landscape (cloud and on-premise)
- Dynamic and intelligent analytics
- Visibility across structured and unstructured data

- SLA and KPI driven service model
- Abstraction between business and technology landscape

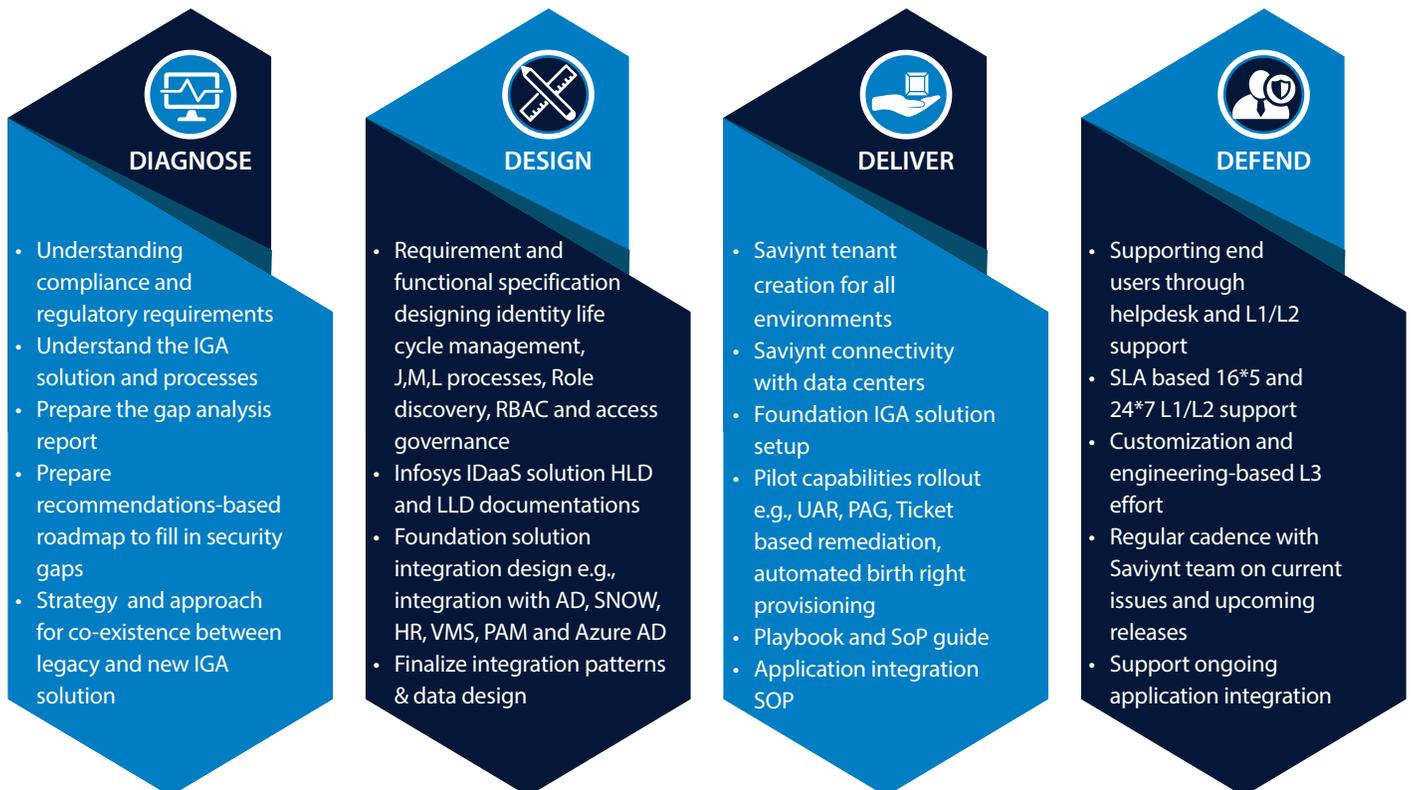

- 360 degrees visibility across on-premise and multi-cloud infrastructure (Azure, AWS, GCP etc.)
- Continuous monitoring of security controls
- Rapid onboarding of applications mapped with enterprise roles and policies

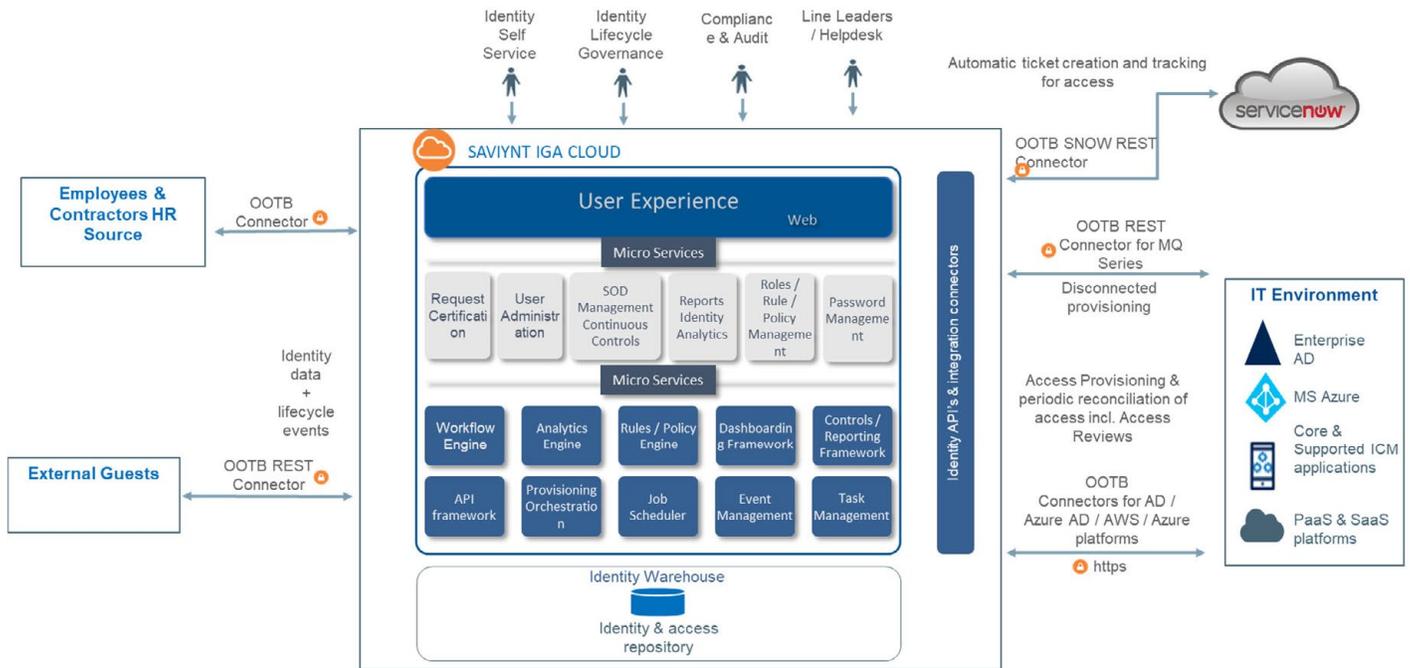

What we do – Our services

The Infosys approach to build a robust IDaaS solution

Infosys – Saviynt IDaaS Solution – A detailed view

Business Benefits

Access Governance for partners – Integrating partners and guest applications with Saviynt IGA to bring all stakeholders under single governance.

Privileged Access Management governance - while PAM is a discipline based on the management of administrator and root privileges, the governance of PAM focuses on the policies and procedures required by an organization to implement it during day-to-day operations.

Vendor Access Management – Regularly ensuring non-employee user accounts are correct and up to date. Conducting periodic check-ins to spot entitlement creep and orphaned accounts and perform corrective measures

Integrations and Governance – Consolidating various authoritative sources to create a single view of all identity records and providing a comprehensive view for governance.

ITSM based access request management – Managing identity governance for self-service items of access request, password management and account controls. Intelligent self-service provides benefits for business cost management, security process improvement and end-user satisfaction.
