

SECURESPLIT™ MIGRATION SUITE

Security and resilience built
into every migration

Infosys
Navigate your next

Identity Change is Inevitable. Risk doesn't have to be.

The modern workplace is undergoing seismic change. Hybrid work, cloud adoption, Zero Trust security, and AI readiness are reshaping how organizations operate. At the same time, enterprises continue to execute mergers & acquisitions, divestitures, and carve-outs - often under intense time pressure and with the goal of minimal disruption to business operations.

As organizations modernize their digital estate, identity has become the control plane for access, security, and user productivity. During M&A and divestiture events, however, that control plane is placed under significant strain. Privilege spikes, coexistence configurations, parallel directories, and policy drift create exposure precisely when organizations must balance business continuity with security and compliance requirements.

Traditional migration tools focus on relocating objects - not on protecting identity from the heightened risks introduced during periods of organizational change.

Migration Risks that Organizations Face Today

Quest + Infosys SecureSplit™ Migration Suite

The Quest + Infosys SecureSplit™ Migration Suite is a joint solution and services initiative designed to help organizations confidently navigate identity separation and integration during mergers, acquisitions, and divestitures.

It combines Quest's Secure Migration — which brings together proven migration, security, and backup and recovery capabilities — with Infosys' global delivery and transformation expertise. Together, they enable enterprises to rapidly carve out, consolidate, or modernize identity environments across Active Directory and Microsoft 365.

Through a structured, repeatable approach, the Suite provides end-to-end support — from assessment and planning through migration execution and post-migration stabilization. By aligning technology and services into a unified offering, Quest and Infosys deliver a differentiated capability that replaces fragmented, point-solution approaches with a secure, scalable, and operationally resilient migration framework.

The Infosys FAST Framework

Infosys delivers SecureSplit™ Migration Suite engagements through the FAST framework — Foundation, Assessment, System Integration, and Transition & Operations. Designed to be flexible and adaptable, FAST can be tailored to the specific needs of each merger, acquisition, divestiture, or carve-out.

Foundation: Strategy alignment and secure planning

- Identity and tenant strategy aligned to business outcomes
- Early identification of legacy dependencies, trusts, and privilege risk
- Secure migration roadmap with rollback and continuity planning

Assessment: Risk visibility before change

- Deep assessment of identity sprawl, policy inconsistencies, and privilege exposure
- Migration readiness across Microsoft AD, Entra ID, M365 workloads, and devices
- Change management and communications planning to reduce operational disruption

System Integration: Security-first execution

- End-to-end secure migration across Microsoft Exchange, Teams, SharePoint, OneDrive, Active Directory, Entra ID, devices, and user profiles
- Real-time auditing and monitoring during elevated-risk change windows
- Preservation of sensitivity labels and encrypted content
- Domain rewrite and password synchronization to reduce authentication friction
- Device re-permissioning to keep endpoints compliant and aligned with identity

Transition & Operations: Resilience, recovery, and long-term value

- Full coexistence to maintain authentication and collaboration
- Object-level backup and recovery for Microsoft AD and Entra ID
- Validation automation to ensure security posture is preserved
- Stabilization of operations post-cutover
- Roadmap for tenant hygiene, Zero Trust enforcement, and AI readiness

Proven Expertise. Unified Execution

Together, Infosys and Quest deliver a differentiated capability that replaces fragmented, point-solution approaches with a secure, scalable, and operationally resilient migration framework — one that aligns technology and services into a single, accountable offering.

INFOSYS ADVANTAGE

- Global delivery and transformation expertise
- Certified experts who apply agile methods to enterprise M&A and divestiture programs
- End-to-end execution through the FAST framework - Foundation, Assessment, System Integration, Transition & Operations
- Change management, communications planning, and post-cutover stabilization

QUEST ADVANTAGE

- Secure Migration Platform unifying migration, security, and backup and recovery
- End-to-end modernization across Active Directory, Entra ID, and Microsoft 365 with security and resilience built in from the start
- Real-time auditing and object-level recovery to minimize exposure during high-risk change windows
- Coexistence and automated device and profile updates that preserve business continuity
- Backed by 25+ years of identity expertise and the first Microsoft 365-certified migration platform

Key Benefits

Eliminate identity blind spots

Expose Tier-0 risk, excessive privileges, and resilience gaps early — across migration phases.

Control privilege and policy drift

Tightly govern coexistence with real-time audit, detection, and least-privilege enforcement.

Prevent migrations from becoming attack windows

Live detection, containment, and rollback of risky identity changes during change windows.

Avoid carrying legacy exposure forward

Stronger governance, detection, and recovery post-cutover keep legacy exposure out of the target state.

Secure modernization on one platform

One platform unifying identity security, resilience, and migration — instead of stitched-together point tools.

Preserve business continuity

Coexistence and automated device and profile updates preserve authentication, collaboration, and productivity.

Fast and secure migration of multiple M365 workloads

Move Exchange Online, OneDrive, SharePoint Online, Microsoft Teams & Groups, and Power Platform - with security, coexistence, and continuity built in.

Preserve protection on sensitive content

Sensitivity-label and encrypted-content migration keeps file protection and governed access intact in the target environment.

Accelerate delivery with AI

AI Log Analyzer and guided remediation cut detection and response time during high-risk change windows.

Client Success Story

Global Media Enterprise - M365 Tenant Consolidation and Split Migration

Challenge: Following an acquisition and a business-unit separation, a global media and entertainment enterprise needed to consolidate one acquired business into its primary Microsoft 365 tenant while separating a media business unit into a new one - spanning 2,200+ users, 28 domain cutovers, and 140 TB of content.

Solution: Infosys delivered the 11-month program using Quest On Demand Migration and Quest ODM AD. The program included Active Directory consolidation, building a new tenant for the separation following CIS security guidelines, executing phased content migration across SharePoint, Teams, OneDrive, Power Platform and domain cutover.

Result: Streamlined collaboration reduced operational duplication, and stronger governance, security manageability, and compliance readiness through a consolidated and cleanly designed tenant landscape.

Navigate Modernization with Confidence

Successful identity transitions demand more than a successful migration. It requires a strategic approach that balances security, governance, resilience, and operational excellence. The Quest + Infosys SecureSplit™ Migration Suite brings these capabilities together in a unified framework designed for complex enterprise transformation.
